Agradecimientos

El presente trabajo de investigación ha sido posible gracias a la ayuda y el apoyo de las tutoras Norena N. Martín Dorta y Paula González de Chaves Assef.

Y por supuesto, agradecer a mi familia por el apoyo brindado a lo largo de mis estudios universitarios.

Resumen

Este proyecto se ha concebido con la idea de analizar la actualidad del BIM en Ingeniería Civil, tanto a nivel nacional como internacional. Muchas de las herramientas existentes son desconocidas por la mayoría de los usuarios del sector, y la interoperabilidad entre ellas todavía es muy baja, debido a la gran cantidad de formatos y la alta pérdida de información entre las distintas fases del proyecto.

El objetivo principal del presente proyecto consiste en ofrecer una visión de la compatibilidad o interoperabilidad de programas de diseño de obras de ingeniería civil, en este caso particular, se desarrolla un caso de estudio con ISTRAM Ispol, y se exporta en un formato compatible con programas similares u otros programas de visualización. Se centrará sobre todo en la visualización de datos relativa al modelo en formato IFC. Este formato, dentro del OpenBIM, es el más destacado en el aspecto de permitir a los usuarios analizar los tipos de elementos y sus relaciones.

En el marco teórico de este proyecto, se desarrollan algunos los conceptos básicos como BIM o interoperabilidad, y se realiza una revisión bibliográfica que muestra la evolución del BIM en las últimas décadas, así como su actualidad y algunas iniciativas que están surgiendo para la implantación de este sistema en la Ingeniería Civil.

El caso de estudio se ubica la Isla de Tenerife, en el Término municipal de Santa Cruz de Tenerife, en el cruce de la carretera de Santa María del Mar (TF-293), con la calle Punta Anaga. Para ello se realiza un levantamiento digital en el programa seleccionado, explicado por fases en este proyecto, y se exporta. Se escogen tres programas en los que se cargará el archivo IFC generado y se estudian las prestaciones que ofrecen en cuanto a interoperabilidad, visualización, pérdida de datos, etc. También se desarrolla una propuesta de clasificación BIM de elementos de Ingeniería Civil.

Palabras clave: BIM, Building Information Modeling, CIM, Civil Information Modeling, Interoperabilidad, Civil, IFC.

Abstract

This project has been conceived with the idea of analysing the present of BIM in Civil Engineering, at national and international level, since many of the existing tools are unknown by most users of the sector, and interoperability between them is still very low, due to the large number of formats and the high loss of information between the different phases of the project.

The main objective of this project is to offer a view of the compatibility or interoperability in civil engineering design programs, in this case, a case study is developed with ISTRAM Ispol and exported in a format compatible with similar programs or other programs display. It will focus mainly on the visualization of data related to the model in IFC format. This format, within OpenBIM, is the most outstanding in the aspect of allowing users to analyse the types of elements and their relationships.

In the theoretical framework of this project, some basic concepts such as BIM or interoperability are developed, and a bibliographic review is made that shows the evolution of BIM in recent decades, as well as its current status and some initiatives that are emerging for the implementation of this system in Civil Engineering.

The case study is located in Tenerife, in the municipality of Santa Cruz de Tenerife, at the crossroad of the Santa María del Mar (TF-293) and Calle Punta Anaga. To do this, a digital design is carried out in the selected program, explained by phases in this project, and exported. Three programs are chosen in which the generated IFC file will be loaded and the features offered are studied in terms of interoperability, visualization, data loss, etc. A BIM classification proposal of Civil Engineering elements is also developed.

Keywords: BIM, Building Information Modeling, CIM, Civil Information Modeling, Interoperabilidad, Civil, IFC.

1. Introducción

En las últimas décadas, el sector de la construcción está evolucionando con mayor rapidez gracias a los avances tecnológicos y nuevas metodologías de trabajo como Building Information Modeling (BIM), un concepto que engloba a todas las disciplinas que intervienen en el desarrollo de un proyecto, desde el diseño hasta la demolición o renovación, abarcando todo el ciclo de vida de un proyecto.

Este proyecto se ha concebido con la idea de analizar a la actualidad del BIM en el sector de la construcción y su desarrollo, que está siendo notable sobretodo en edificación y arquitectura, no así en la ingeniería civil, donde esta evolución y su acogida en el sector, tiene un ritmo más lento tanto a nivel nacional como internacional. Muchas de las herramientas existentes son desconocidas por muchos usuarios, y la interoperabilidad entre ellas todavía es deficiente, debido a la gran cantidad de formatos y la alta pérdida de información entre ellos y en las distintas fases del proyecto.

1.1. Antecedentes

La mayoría de los textos encontrados que tratan la interoperabilidad entre programas BIM y que desarrollen un ejemplo práctico sobre el tema, están relacionados con la edificación. En Ingeniería Civil, su número es más reducido y se desarrollan desde un punto de vista teórico. Aun así, se encuentran textos donde se realizan análisis sobre la compatibilidad de programas y formatos. En este proyecto se tratará de desarrollar un ejemplo práctico para mostrar las posibilidades que ofrecen hoy en día los software, tanto de diseño como de visualización, y el nivel de precisión y volumen de datos que se pueden transportar, así como la lectura de esos datos entre los distintos programas.

1.2. Objetivos

El objetivo principal del presente proyecto consiste en ofrecer una visión de la compatibilidad o interoperabilidad de programas de diseño de obras de ingeniería civil, en este caso particular, se desarrolla un caso de estudio con ISTRAM Ispol, y exportarlo en un formato compatible con programas similares u otros programas de visualización. Se centrará sobre todo en la visualización de datos relativa al modelo en formato IFC.

Este formato, dentro del OpenBIM, es el más destacado en el aspecto de permitir a los usuarios analizar los tipos de elementos y sus relaciones.

1.3. Hipótesis

En este proyecto se comprobará la compatibilidad entre software que se utilizan en Ingeniería Civil, y comprobar en qué punto se encuentra dicho sector en lo referente al BIM. Se intentará demostrar si existe un tipo de archivo que conserve un flujo de datos óptimo, es decir, que pierda la menor cantidad de datos posible sobre un proyecto en la migración o exportación entre distintos software.

1.4. Metodología

La metodología a seguir del presente proyecto será mediante la elaboración de un caso de estudio, que vendrá precedido de la definición de un marco teórico relacionado con el mismo.

ACTIVIDAD 1: MARCO TEÓRICO DEL ESTUDIO

ACTIVIDAD 2: CASO DE ESTUDIO: TF-293 CON CALLE PUNTA DE ANAGA

Para abarcar el **marco teórico**, se hará un estudio del estado de la tecnología o estado de arte, definiendo en primer lugar los conceptos básicos que se deben tener muy en cuenta para entender la finalidad del proyecto, y, en segundo lugar, haciendo un resumen o repaso de los estudios previos y la bibliografía que se han consultado para la elaboración del presente proyecto. También se hará un análisis y comparativa de programas de diseño y visualizadores.

En el **caso de estudio** se definirán las condiciones iniciales del tramo objeto de estudio, se hará un breve repaso de la legislación, normativa, planes urbanísticos, etc. que están vigentes en la actualidad. Luego se explicará el proceso de modelado BIM o Modelado CIM, que está dividido en 6 fases, se planteará una propuesta de clasificación BIM de elementos de infraestructura, y, por último, se expondrán los resultados y conclusiones

CASO DE ESTUDIO: TF-293 CON CALLE PUNTA DE ANAGA

FASE 1: REVISIÓN DE LA NORMATIVA

FASE 2: DESCRIPCIÓN DEL TRAMO

FASE 3: MODELADO CIM DEL CASO DE ESTUDIO

3.1. MODELO DEL TERRENO

3.2. TRAZADO EN PLANTA

3.3. TRAZADO EN ALZADO

3.4. CRUCE

3.5. CÁLCULO DE VOLÚMENES

3.6. CÁLCULO DEL PROYECTO

FASE 4: EXPOTACIÓN/IMPORTACION EN IFC

FASE 5: PROPUESTA DE CLASIFICACIÓN BIM DE ELEMENTOS DE
INFRAESTUCTURAS

FASE 6: RESULTADOS Y CONCLUSIONES

2. Marco de trabajo del estudio

2.1. Conceptos

- **Building Information Modeling (BIM)**

BIM es un concepto que según el Instituto de Tecnología de la Construcción de Cataluña (ITeC)¹ se define como *“un sistema de gestión de las obras de construcción que está basado en el uso de un modelo tridimensional virtual relacionado con bases de datos. El BIM permite producir y almacenar toda la información necesaria para operar en las distintas fases del ciclo de vida de las construcciones en los campos de la edificación y la ingeniería civil”*. Este concepto, en la ingeniería civil, también se le conoce como Civil Information Modeling (CIM).

Según BuildingSMART², el BIM *“es una metodología de trabajo colaborativa para la creación y gestión de un proyecto de construcción. Su objetivo es centralizar toda la información del proyecto en un modelo de información digital creado por todos sus agentes”*.

- **Interoperabilidad**

Se define interoperabilidad como la capacidad de un programa, producto o sistema de intercambiar información con otros programas existentes o futuros y funcionar sin perder información, sin restricciones de acceso o de implementación.

Según Mojica Arboleda et al. (2012), el intercambio de información es clave en los procesos BIM, y exponen, según la bibliografía especializada, que la definición del término ‘interoperabilidad’ radica en la posibilidad de compartir información entre los involucrados en un proceso BIM (Eastman et al., 2011) que es facilitada por la compatibilidad de las herramientas, una definición similar a la expuesta en el párrafo anterior.

También proporciona una definición muy parecida la Norma ISO 19101, que propone que la interoperabilidad es *“la capacidad de los sistemas o componentes de intercambiar información y de poder controlar el procesamiento cooperativo entre*

¹ Instituto de Tecnología de la Construcción de Cataluña. <https://itec.es>

² BuildingSMART. <https://www.buildingSMART.es>

aplicaciones". También añade que *"para ello se precisan: capacidades de localización de la información y las herramientas de proceso; entender y usar la información y las herramientas descubiertas; poder desarrollar entornos de proceso para uso comercial sin restricciones de la oferta única en el mercado; poder desarrollar infraestructuras de información y procesamiento para servir a los distintos tipos de mercado y promover un mercado libre de competencia entre los consumidores"* (Nieto Julián et al., 2012).

- **OpenBIM**

En un entorno de trabajo restringido, los usuarios se ven obligados a trabajar en una plataforma o herramienta de software determinada, limitando así la accesibilidad a aquellos que no cuentan con dicha plataforma o no están instruidos sobre la misma, lo que lleva a una desconexión en la comunicación entre los diferentes participantes que tratan de compartir datos en un entorno común.

OpenBIM *"es un enfoque universal al diseño colaborativo, realización y operativa de los edificios basado en flujos de trabajo y estándares abiertos"* (Graphisoft, s.f.). Esto implica un nuevo modo de comunicación digital, que permite que distintas aplicaciones mantengan la conexión con el modelo y los datos asociados al mismo y de colaboración en los flujos de trabajo.

Desde la perspectiva de los proveedores de software, esta dinámica se debe percibir como una apertura del mercado, para eliminar los límites inherentes a un sistema cerrado, aumentando su compatibilidad con otras herramientas, y la posible llegada de nuevos usuarios.

El principal impulsor de la difusión del OpenBIM es la organización BuildingSMART International, a través de la creación, el mantenimiento y el uso de estándares abiertos de interoperabilidad que contienen la información debidamente estructurada. Según la organización, la importancia del OpenBIM reside en estos puntos:

- Funcionar con un flujo de trabajo transparente y abierto.
- Crear un lenguaje común para procesos con numerosas referencias.
- Proporcionar datos permanentes para utilizarlos a lo largo del ciclo de vida del proyecto.
- Cualquier proveedor de software puede participar y competir en soluciones de primera clase, independientemente del sistema que utilicen.

- Reforzar la oferta de productos en línea, y suministrar los datos del producto directamente en BIM.

- **Industry Foundation Classes (IFC)**

Se trata de un formato abierto y neutro, no controlado por los productores de software, concebido con la idea de facilitar la interoperabilidad entre varios operadores.

Según BuildingSMART, el formato IFC es la herramienta principal para materializar el OpenBIM, “*que representa un método universal para la colaboración en el diseño y construcción de los edificios basados sobre estándares y flujos de trabajo abiertos*” (BibLus, 2017). Es un formato desarrollado por la Internacional Alliance for Interoperability (IAI), que desde 2008 se transformó en la BuildingSMART (Figura 1).

Figura 1. Logo IFC. Fuente: BuildingSMART.

Su desarrollo se inicia en 1994 y en la actualidad, según BuildingSMART, existen diferentes versiones que se detallan en la Tabla 1. Los lanzamientos anteriores (IFC1.0, IFC1.5, IFC1.5.1 e IFC2.0) están desactualizados.

Nombre	Abreviatura	Fecha de publicación	Descripción
Versiones anteriores de IFC			
IFC2x	IFC2x	Octubre de 2000	Primer lanzamiento de la plataforma IFC2x, que se centró en proporcionar una plataforma estable.
IFC2x Addendum 1	IFC2x-Add1	Octubre de 2001	Pequeño apéndice de IFC2x para solucionar los problemas que surgieron durante la implementación. Esta versión se utilizó para la implementación y certificación de IFC2x.
IFC2x Edition 2	IFC2x2	Mayo de 2003	Segunda versión de la plataforma IFC2x con varias extensiones de IFC en áreas de dominio.
IFC2x Edition 2 Addendum 1	IFC2x2-Add1	Julio de 2004	Pequeña adición de IFC2x para solucionar los problemas que surgieron durante la implementación. Esta versión se utilizó para la implementación y certificación de IFC2x2.
IFC2x Edition 3	IFC2x3	Febrero de 2006	Tercer lanzamiento de la plataforma IFC2x, principalmente se centró en la mejora de la calidad de IFC2x2.
IFC2x Edition 3 Technical Corrigendum 1	IFC2x3-TC1	Julio de 2007	Corrección de documentación y restricciones únicamente para la actualización de IFC2x3, es igual a la IFC2x3 en términos del archivo de intercambio IFC y ambas se usan para la implementación y certificación IFC2x3, y son muy recomendables para su implementación.
Versión actual de IFC			
IFC2x Edition 4 (IFC2x4/IFC4)	IFC4	Marzo de 2013	Incorpora varias extensiones de IFC en construcción, servicio de construcción y áreas estructurales, mejoras de la geometría y otros componentes de recursos, y numerosas mejoras de calidad, especificación ifcXML simple completamente integrada, y un nuevo formato de documentación.

Nombre	Abreviatura	Fecha de publicación	Descripción
Versión actual de IFC			
IFC4 Addendum 1	IFC4-Add1	Julio de 2015	Primer apéndice de IFC4 que incorpora las mejoras necesarias que se habían identificado durante las implementaciones piloto y las actividades de desarrollo para las primeras Definiciones de Vista de Modelos.
IFC4 Addendum 2	IFC4-Add2	Julio de 2016	Segundo apéndice de IFC4 que incorpora las mejoras necesarias que se habían solicitado antes de iniciar el proceso de certificación IFC4 para la vista de referencia IFC4 y la vista de transferencia de diseño IFC4, en particular para definiciones de geometría mejoradas.
Próxima versión de IFC (en fase de planificación)			
IFC5	IFC5	Próximamente	Actualmente se encuentra en la fase de planificación inicial, se espera que incluya soporte completo para varios dominios de infraestructura y más capacidades paramétricas. El primer proyecto activo bajo buildingSMART International para expandir la definición de IFC para el dominio de la infraestructura es el Proyecto de Alineación IFC.

Tabla 1. Versiones del formato IFC. Fuente: BuildingSmart International³

En la Tabla 2 se pueden ver las clases relacionadas con los niveles de estructura espacial:

³ BuildingSMART International. <http://www.buildingsmart-tech.org/specifications/ifc-releases/summary>

Clase	Propósito
IfcProject	Definición del marco de trabajo del proyecto
IfcSite	Provee de información acerca del emplazamiento donde se encuentra la construcción.
IfcBuilding	Representa una construcción, se usa para proveer de información adicional del edificio. Se asocia con <i>IfcSite</i> , si no existe, directamente con <i>IfcProject</i> .
IfcBuildingStorey	Definición de una planta, una estructura vertical normalmente dentro de una construcción. Siempre va asociada a <i>IfcBuilding</i> .
IfcSpace	Definición de un espacio como un área funcional o volumen con información espacial. Se asocia a <i>IfcBuildingStorey</i> , si existe. Si es un espacio exterior, se asocia a <i>IfcSite</i> .

Tabla 2. Principales clases IFC relacionadas con niveles de estructura espacial.

2.2. Estudios previos

En este apartado, se aborda una revisión bibliográfica con el fin de documentar el estado del BIM actualmente, su evolución y perspectivas.

En la década de los 90, la introducción de modelos basados en objetos permitió que los elementos en 2D realizados en CAD fueran reemplazados por objetos en 3D con la capacidad de representar las propiedades y el comportamiento de las partes de una edificación. Esta novedad permitió a los diseñadores rotar el objeto de manera que podían ver el proyecto desde diferentes puntos de vista, lo que amplió su perspectiva y poder ver el proyecto en su conjunto y no solo fragmentado como antes. Además, también en esa década, el intercambio de información en formato digital se vio potencialmente beneficiado gracias al creciente uso del internet. Estos factores influyeron en el desarrollo de software BIM y en su concepción como un conjunto de tecnologías (Kivits & Furneaux, 2013).

A nivel internacional son muchos los estudios que se han hecho sobre las posibilidades del BIM y su alcance. El tema de la compatibilidad entre programas y formatos es clave para que la filosofía de trabajo que propone el BIM sea realidad.

En los últimos años, en el desarrollo del BIM se integran modelos paramétricos de cada una de las disciplinas involucradas en el diseño, que, mediante sistemas de comunicación de información y programación de obra, tienen la capacidad de soportar cambios y regenerarse a medida que se van sucediendo los mismos (Eastman et al., 2011).

“Alcanzar la interoperabilidad completa entre las diversas herramientas informáticas empleadas por los agentes de la construcción es muy difícil de desarrollar y conseguir, ya que cada programa trabaja con códigos informáticos diferentes, siendo compleja la comunicación perfecta entre ellas. Es pues imprescindible conocer de antemano el alcance de la interoperabilidad mediante IFC entre diversos programas, para trabajar así de la manera más eficiente y rigurosa posible” (Brugarolas et al., 2016).

Según J. Park et al. (2015), a escala mundial, existe una variedad de software comercial para los modelos BIM, que están diseñados para intercambiar datos con respecto a los ciclos de vida de las instalaciones. Los distintos comerciales de software BIM tiene diferentes tipos de software dependiendo de la variedad de BIM que se utiliza según el propósito y cada uno tiene su propio formato de datos, lo que implica la falta de compatibilidad de software (o la interoperabilidad) para los datos BIM. Esto puede dificultar la implementación de BIM.

Para intentar resolver este problema, la plataforma buildingSMART propone el formato Industry Foundation Classes (IFC), que como ya se definió en el apartado 2.1 (Conceptos), es un estándar de intercambio internacional de datos. Sin embargo, este formato IFC tiene sus problemas estructurales, ya que no aceptan todas las diferencias en la forma en la que se organizan los datos o la definición de objeto para cada paquete de software comercial (Eastman et al., 2011).

Además, los formatos IFC todavía no permiten un intercambio de información de forma completa y rápida para proyectos de infraestructura civil. En cualquier caso, los primeros desarrollos en BIM en infraestructuras permiten acumular una valiosa experiencia y ponen de manifiesto los problemas que se deberán resolver en el futuro. Cabe destacar

la necesidad de desarrollar los formatos de comunicación IFC y BCF (Martínez-Ibáñez et al., 2017).

Actualmente, la buildingSMART, según su propia página web, en tema de obras de infraestructuras, trabaja en extender las definiciones de IFC para este tipo de obra, comenzando con la alineación y expandiéndose a otras aéreas tales como carretera, rieles, puentes, y túneles.

Existe otro formato para la transferencia de datos de información que son los archivos COBie (Construction Operations Building Information Exchange), un formato que, según S. A. Brugarolas et al. (2016), se están desarrollando a la vez que el IFC y que sirve también para suplementarlo. Su objetivo principal es facilitar y estandarizar la transferencia de la información de un proyecto en la fase de operación y mantenimiento. El artículo del que se extrae esta información se refiere, más concretamente, a edificación, no a la obra civil, donde su utilidad en esta área, está en entredicho y existen diferentes de opiniones entre los expertos.

En relación con obra civil o infraestructuras, el desarrollo de los softwares se apoya en protocolos de trabajo y softwares propios de la edificación, donde la experiencia en BIM tiene mayor recorrido. Sin embargo, las formas de contratación y el tipo de relación entre los agentes que intervienen en el proceso son muy diferentes, y los softwares de arquitectura no están pensadas para el desarrollo de obras lineales (Martínez-Ibáñez et al., 2017).

Una de las propuestas españolas para el desarrollo del BIM en la obra civil es el proyecto ROAD-BIM - "Diseño y desarrollo de tecnologías BIM para la validación y gestión de proyectos constructivos de carreteras, su explotación y la gestión de la seguridad de dichas infraestructuras viarias", un proyecto de investigación financiado por el Centro de Desarrollo Tecnológico Industrial (CDTI) del Ministerio de Economía y Competitividad para conseguir implementar el BIM en infraestructuras obligatoriamente en Julio de 2019 (Marquez, 2017). ROAD-BIM⁴ tiene por objetivo principal desarrollar con más eficacia de los proyectos de carreteras mediante la aplicación de BIM. En su página web, se detalla en profundidad sus objetivos, colaboradores, etc. Esta iniciativa es parte de un proyecto mayor que, junto con iniciativas de otros países como Alemania,

⁴ ROAD-BIM. <http://roadbim.es/>

China, Corea o Finlandia y apoyado por BuildingSMART, buscan desarrollar el que se denominará IFC-5, un formato para el intercambio de datos y el primer estándar IFC para infraestructuras.

2.3. Interoperabilidad en el modelado de Infraestructuras

Para este proyecto se ha realizado un estudio de los softwares de modelado de Infraestructuras y los visores IFC del mercado, comparándolos entre sí, y evaluando distintos aspectos como su función o propósito principal, su precio y otros ítems. La finalidad de esta comparativa es hacer un breve estudio de las prestaciones que ofrecen en la actualidad estas herramientas como medio para trabajar con los modelos de infraestructuras.

De los software de modelado existentes, se estudiarán cuatro, que son los tuvieron en cuenta para la elaboración del proyecto por el conocimiento previo disponible por el autor de este trabajo:

- **Autodesk Civil 3D**
 - Software de Autodesk para Ingeniería Civil en 3D para proyectos de diseño topográfico, documentación manejo de datos de transporte, captura de datos, modelado de terreno, perfiles y secciones transversales, además diseño y análisis de drenaje, información geoespacial, y landscape.
 - El precio de una licencia es de 2.837,45 € por un año, aunque dispone de una licencia educacional para estudiantes.

- **ISTRAM Ispol**
 - Software de Buhodra Ingeniería S.A. con estructura modular que permite escoger desde una configuración sencilla para proyectar carreteras y autopistas, hasta proyectos de ferrocarriles, de distribución y abastecimiento mediante redes de tubos, de refuerzo y mejoría de las vías existentes, de proyectos de urbanización o extracción de minerales, entre otros.
 - El precio de la licencia es variable dependiendo de los módulos que se quieran adquirir. El precio de una licencia con Cartografía y Carreteras es de 2.286,90 € por un año. Posee licencia educacional para estudiantes.

- **Autodesk InfraWorks**
 - Software de Autodesk para ingeniería Civil de diseño preliminar que ayuda a ver una visualización 3D rápida de un proyecto, se puede combinar y conectar datos e información de diversos archivos de trabajo y programas.
 - El precio de una licencia es de 2.123,55 € por un año, aunque dispone de una licencia educacional para estudiantes.

- **Bentley OpenRoads Designer**
 - Software de Bentley Systems, que en su página web se define como “un entorno de modelado para fomentar una ingeniería enfocada en la construcción que ayude a acelerar la ejecución de proyectos de redes viarias, unificando los procesos de diseño y construcción desde el concepto hasta la finalización. La aplicación ofrece unas capacidades de diseño completas para la inspección del terreno, drenaje, servicios subterráneos y diseño de carreteras”.
 - No se ha podido obtener el precio de una licencia, pero posee licencia educacional.

**Prueba gratis de 14 días.

Tabla 4. Comparativa de visores IFC. Basada en tabla obtenida en <https://bimvision.eu/es/funcionalidades/>

Para el desarrollo de los testeos de este proyecto se han escogido tres de los programas nombrados en la Tabla 4 que son: Autodesk Naviswork Manage, Solibri Modelo Viewer y BIMVision. La elección de estos tres se debe sobre todo a la facilidad de adquisición, ya que el primero se ha obtenido con una licencia educacional a través de la Universidad de La Laguna, y los otros dos software gratuitos, lo que facilita a otros usuarios su utilización. En ellos se cargará el archivo IFC del proyecto y se estudiarán las prestaciones que ofrecen en cuanto a visualización, pérdida de datos, etc.

3. Caso de Estudio: TF-293 con Calle Punta de Anaga

Se procederá a desarrollar el proceso de diseño del levantamiento digital en el programa ISTRAM Ispol del caso de estudio, que se ubica en la Isla de Tenerife, en el término municipal de Santa Cruz de Tenerife, en el cruce de la carretera de Santa María del Mar (TF-293), que será el eje 1, con la calle Punta Anaga, que será el eje 2 (Figura 2).

Figura 2. Cruce TF-293 con calle Punta de Anaga. Fuente: visor Grafcan.

3.1. Revisión de la Normativa

La legislación y normativa de aplicación para el diseño y construcción de carreteras:

- Ley 37/2015, de 29 de septiembre, de Carreteras
- Norma 6.1-IC. Secciones de firme
- Norma 3.1-IC. Trazado
- Pliego de Prescripciones Técnicas Generales para obras de carreteras y puentes (PG3)

Cabe destacar que el programa que se va utilizar posee la normativa actual sobre el diseño de carreteras y es capaz de indicar si la vía cumple la normativa con los parámetros establecidos. Pero en este proyecto no es de aplicación ya que no se trata de un proyecto de nuevo trazado, ni de una reforma de la carretera actual, sino de un levantamiento digital del trazado existente, y, por lo tanto, su corrección o mejora, en caso de no cumplirla, no es objeto de este proyecto.

Para el diseño y ejecución de una carretera también se debe tener en cuenta el Plan General de Ordenación (PGO) de la zona, aunque por las mismas razones que la normativa, tampoco será objeto del proyecto.

Además, el uso de herramientas digitales está legislado en el sector de la construcción en Europa, por la Directiva 2014/24/UE del Parlamento Europeo y del Consejo de 26 de febrero de 2014, sobre contratación pública y por la que se deroga la Directiva 2004/18/CE.

En España, desde el 9 de marzo de 2018 entró en vigor la Ley 9/2017, de 8 de noviembre, de Contratos del Sector Público, por la que se transponen al ordenamiento jurídico español las Directivas del Parlamento Europeo y del Consejo 2014/23/UE y 2014/24/UE, de 26 de febrero de 2014. En esta ley, en la disposición adicional decimoquinta se lee:

“Disposición adicional decimoquinta. Normas relativas a los medios de comunicación utilizables en los procedimientos regulados en esta Ley. [...]

[...] 6. Para contratos públicos de obras, de concesión de obras, de servicios y concursos de proyectos, y en contratos mixtos que combinen elementos de los mismos, los órganos de contratación podrán exigir el uso de herramientas electrónicas específicas, tales como herramientas de modelado digital de la información de la construcción (BIM) o herramientas similares. En esos casos, ofrecerán medios de acceso alternativos según lo dispuesto en el apartado 7 de la presente Disposición adicional hasta el momento en que dichas herramientas estén generalmente disponibles para los operadores económicos. [...]”

3.2. Descripción del tramo

El tramo diseñado para el estudio abarca, como se puede apreciar en la Figura 3, desde la rotonda hasta aproximadamente la mitad de la recta de la después del segundo cruce de la carretera de Santa María del Mar con la calle Punta Anaga, y suprimiendo el primer cruce. El tramo diseñado posee una longitud de 650 metros en la TF-293 y 300 metros en la calle Punta de Anaga.

Figura 3. Tramo de estudio en 3D. Fuente: Google Maps

El tramo de la calle Punta de Anaga a diseñar tiene una sección transversal formada por dos calzadas separadas por una mediana de siete metros de ancho. Cada calzada posee dos carriles de tres metros por sentido. Además, la sección consta de una fila de aparcamientos y acera en cada extremo de la sección.

Figura 4. Calle Punta de Anaga en 3D. Fuente: Google Maps

Figura 5. Inicio del tramo de estudio de la calle Punta de Anaga. Fuente: Elaboración Propia.

Figura 6. Final del tramo de estudio de la calle Punta de Anaga (cruce). Fuente: Elaboración Propia.

El tramo de la carretera de Santa María del Mar tiene una sección transversal formada por un carril de 3,5 metros por sentido sin arcén en la mayor parte del recorrido y con aceras de 1,5 aproximadamente, también posee varios carriles de auxiliares en los cruces.

Figura 7. Inicio del tramo de estudio de la carretera de Santa María del Mar. Fuente: Elaboración Propia.

En la Figura 8, se ve la primera intersección del tramo de estudio de la carretera de Santa María del Mar con la calle Punta de Teno, que no será objeto de este proyecto.

Figura 8. Primer cruce del tramo de estudio de la carretera de Santa María del Mar con calle Punta de Teno. Fuente: Elaboración Propia.

Figura 9. Segundo cruce del tramo de estudio de la carretera de Santa María del Mar con calle Punta de Anaga. Fuente: Elaboración Propia.

Figura 10. Sección después del cruce del tramo de estudio de la carretera de Santa María del Mar con calle Punta de Anaga. Fuente: Elaboración Propia.

Figura 11. Final del tramo de estudio de la carretera de Santa María del Mar. Fuente: Elaboración Propia.

3.3. Modelado CIM del caso de estudio

Para el desarrollo del proceso de diseño se utilizó la versión ISTRAM Ispol 18.04.04.02 64 bits (2018/04/02) con una Licencia Educacional. La elección del software se debe en primer lugar a que es uno de los programas de Ingeniería Civil más usados en España, una herramienta que permite el diseño y control constructivo de proyectos de obra civil. Entre sus ventajas posee soporte técnico vía email, para resolver cualquier duda de los usuarios, que se ha empleado en varias ocasiones en el desarrollo de este proyecto. Además, también promocionan cursos para el aprendizaje del programa. Otro de los motivos de su elección programa se debe al conocimiento previo disponible por el autor de este trabajo.

En la Figura 12 se puede ver un esquema resumen de las fases de modelado de la infraestructura.

Figura 12. Esquema del proceso de Modelado CIM. Fuente: Elaboración propia

3.3.1. Modelo del terreno

Una vez instalado e iniciado el programa ISTRAM Ispol, se crea una carpeta para el proyecto. Deben configurarse las librerías del proyecto y definir las coordenadas geográficas (Figura 13).

Figura 13. Interfaz de configuración de coordenadas. Fuente: Elaboración propia.

La cartografía se ha obtenido del Servicio de Venta y descarga de Información Geográfica y Territorial de Canarias, Grafcan⁵. Los archivos descargados que contienen el tramo de proyecto se denominan 074-TF13C y 074-TF20A, en formato DGN versión 7, de los años 2004-2006, y a escala 1:5000 (versión gratuita de la cartografía).

⁵ Tienda virtual Grafcan. <http://tiendavirtual.grafcan.es/index.jsf>

Para facilitar el empleo de la cartografía se tuvo que pretratar el archivo inicial en Autocad, concretamente en su versión 2018. Los pasos seguidos fueron: cargar los dos archivos DGN en el mismo archivo, encuadrar la zona de actuación, recortar el exterior la zona de trabajo del proyecto, eliminar las capas que no aportan información útil y guardar en DWG en versión de 2013, debido a que el ISTRAM Ispol tiene dificultades para leer la versión 2018.

Una vez pretratada, se procedió a cargar la cartografía, configurando previamente las opciones de importación de DWG del programa. Después de cargar la cartografía hay que definir otros aspectos y crear la superficie con el menú de la Figura 14.

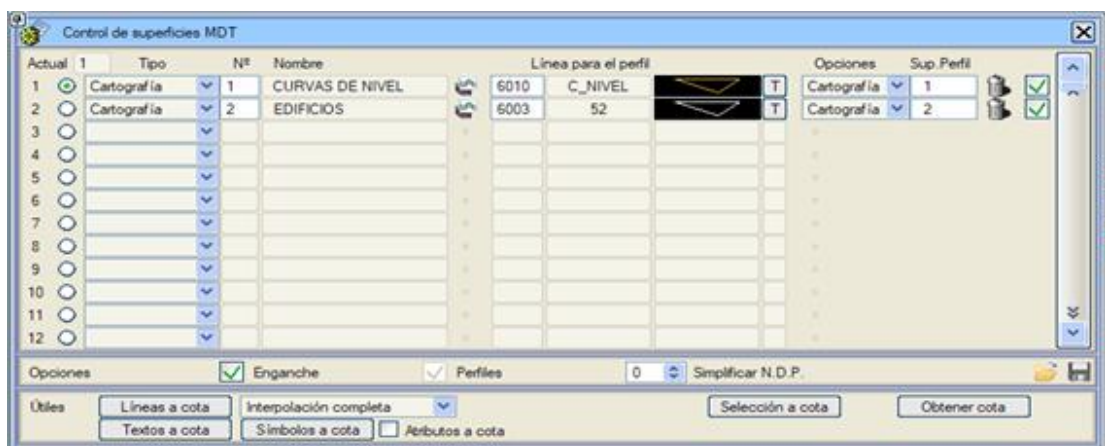

Figura 14. Menú de control de Superficies de ISTRAM Ispol. Fuente: Elaboración propia.

Configurado todo, el resultado se muestra en la Figura 15 y Figura 16, donde se ve la cartografía con detalles. Algunos de estos detalles se pueden quitar mediante un comando del ISTRAM Ispol que no se comentará en este caso.

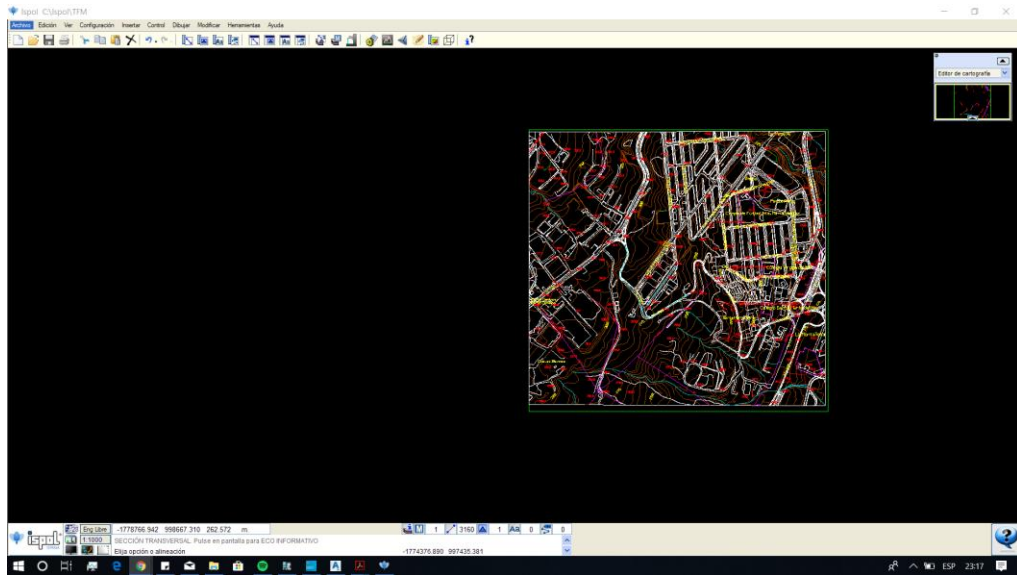

Figura 15. Captura del programa con la Cartografía ya cargada y tratada. Fuente: Elaboración propia.

Figura 16. Ampliación de la captura de la cartografía. Fuente: Elaboración propia.

3.3.2. Trazado en Planta

A continuación, para comenzar el diseño de la obra lineal, lo primero es definir los datos del proyecto y los dos ejes con sus datos correspondientes (nombres, normativa, tipo de carretera, velocidad de proyecto, etc...) como se ve en la Figura 17 y Figura 18.

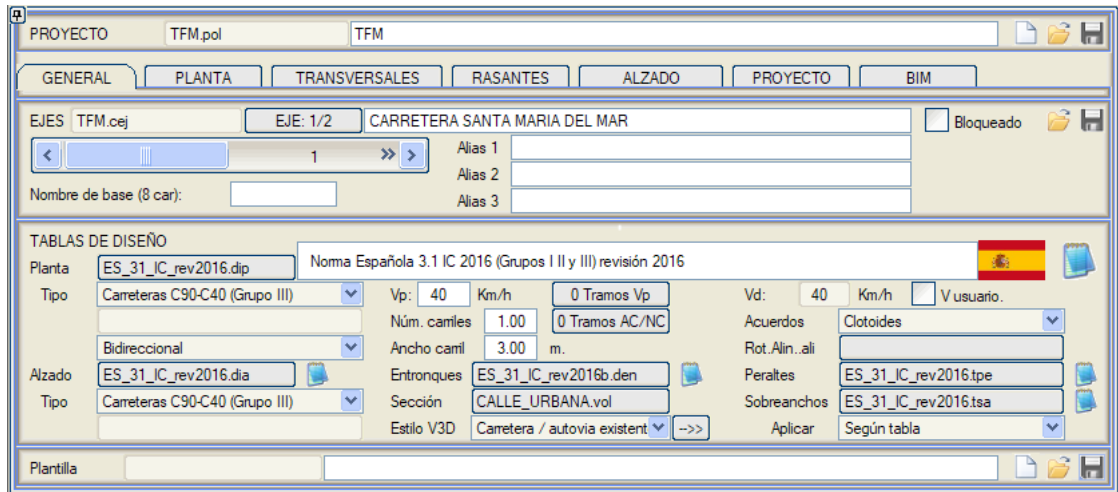

Figura 17. Interfaz de datos del eje 1. Fuente: Elaboración propia.

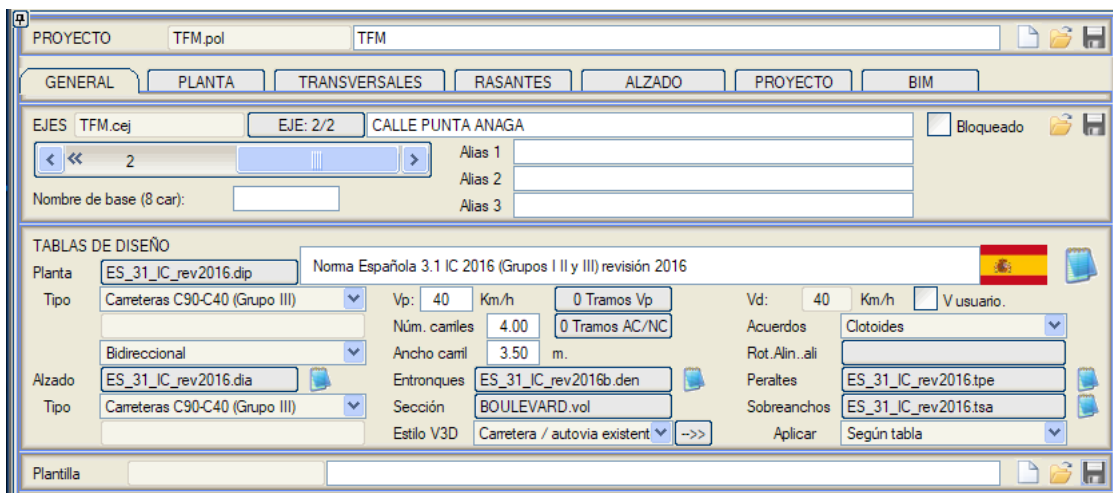

Figura 18. Interfaz de datos del eje 2. Fuente: Elaboración propia.

Una vez definidos estos datos, se procede al trazado en planta de los ejes, que, en este caso, se diseñarán siguiendo los ejes de las vías actuales, que son la carretera de Santa María del Mar, como eje 1 (Figura 19) y la calle Punta de Anaga, como eje 2 (Figura 20).

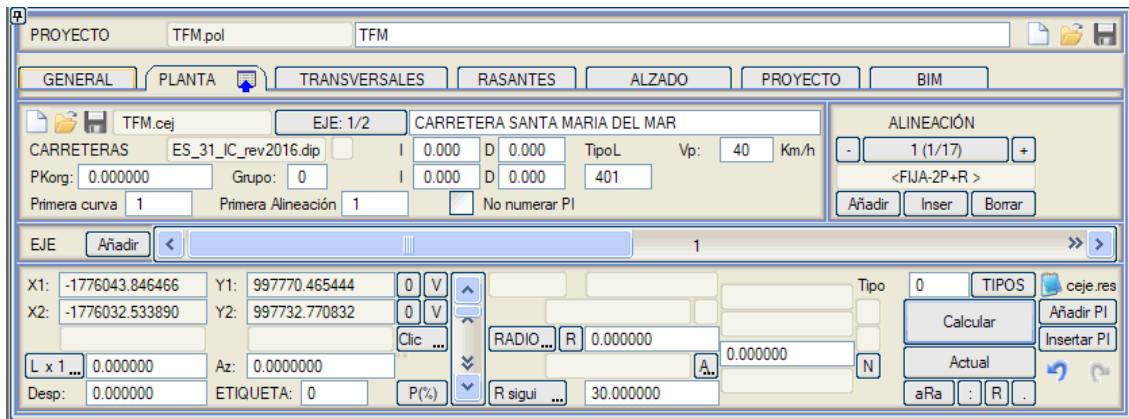

Figura 19. Datos de alineación en planta del eje 1. Fuente: Elaboración propia.

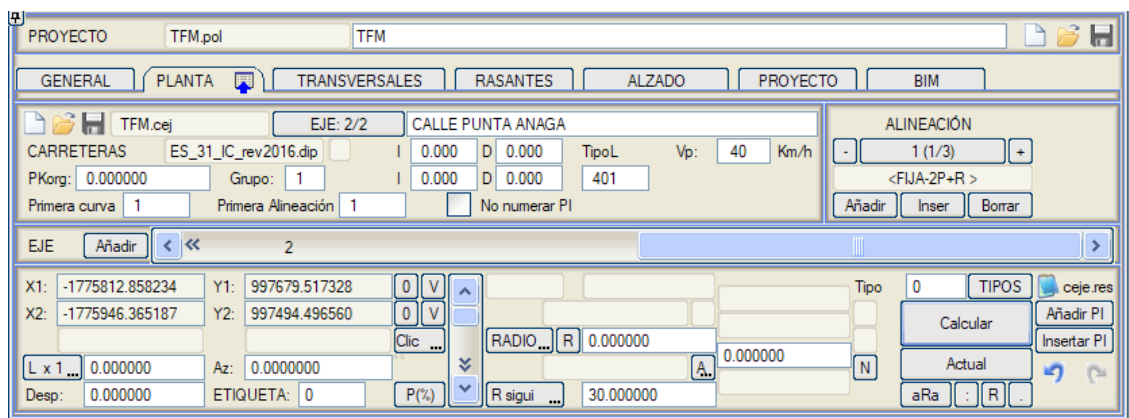

Figura 20. Datos de alineación en planta del eje 2. Fuente: Elaboración propia.

Definidos los ejes, se generan a continuación los perfiles transversales, teniendo en cuenta dos consideraciones: en primer lugar, se define con el valor de 100 los semi anchos de banda y con 5 las equidistancias independientemente del ángulo de la curva (Figura 21), y, en segundo lugar, se añaden perfiles transversales extra en el eje 2 en la intersección de los ejes desde el menú de Transversales/PK singulares como se ve en la Figura 22. Esta última determinación se toma debido a que, sin ella, se produciría un hueco en la generación 3D del proyecto.

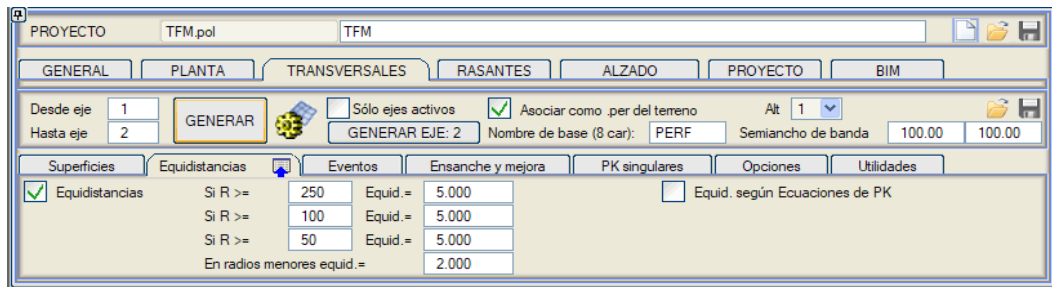

Figura 21. Menú de perfiles transversales. Equidistancias. Fuente: Elaboración propia.

Figura 22. Menú de perfiles transversales. PK singulares. Fuente: Elaboración propia.

Los perfiles de cada eje se pueden generar a la vez o individualmente en caso de que se quiera hacer algún cambio en la configuración. El resultado se muestra en la Figura 23.

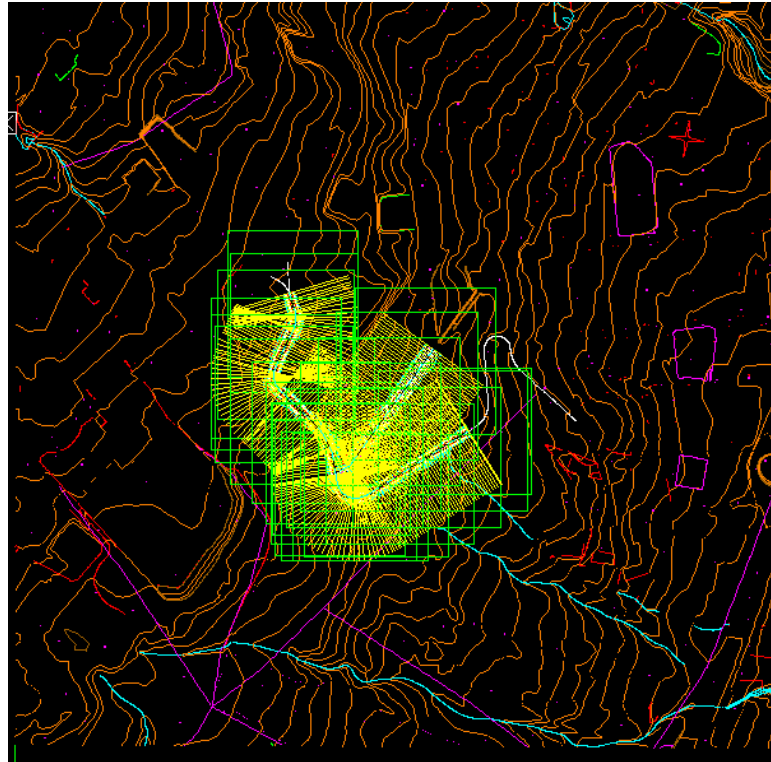

Figura 23. Perfiles transversales ya generados. Fuente: Elaboración propia.

3.3.3. Trazado en Alzado

Para definir las rasantes de ambos ejes, se acude al menú de rasantes (Figura 24 y Figura 26) y se añaden los acuerdos verticales necesarios teniendo en cuenta que tienen que ajustarse al perfil actual del terreno, ya que, la rasante de los ejes debe corresponder aproximadamente a la del viario existente. En la Figura 25 y la Figura 27 se pueden ver los perfiles de las rasantes ya ajustados.

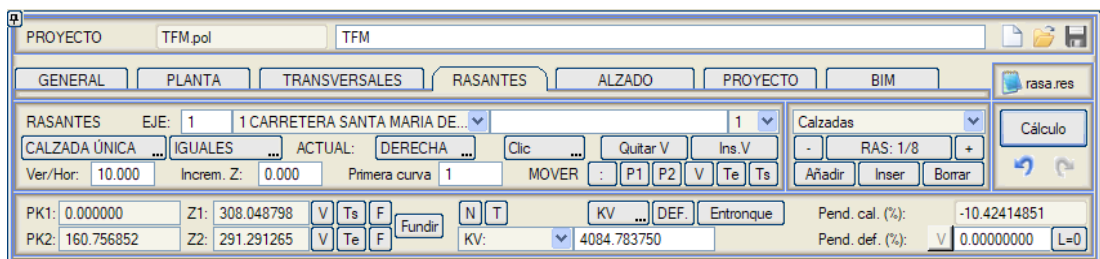

Figura 24. Menú de Rasantes (eje1). Fuente: Elaboración propia.

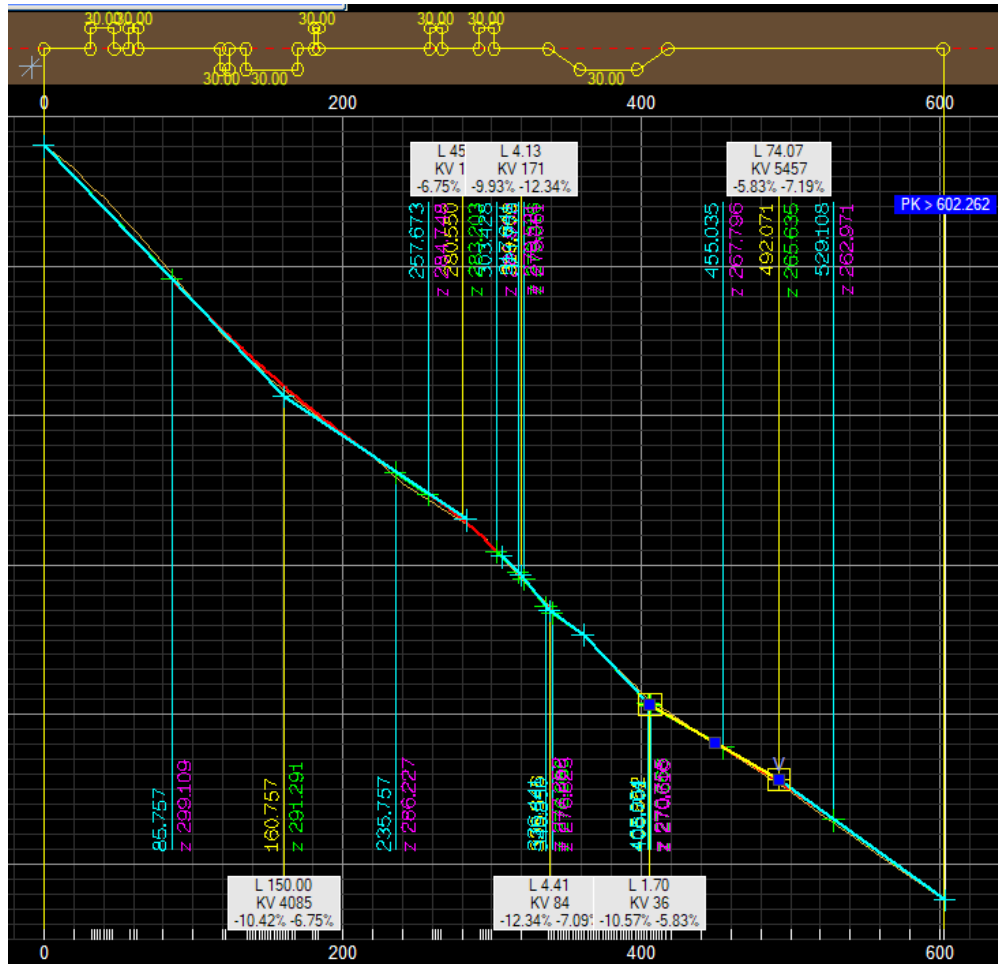

Figura 25. Perfil de rasantes del eje 1. Fuente: Elaboración propia.

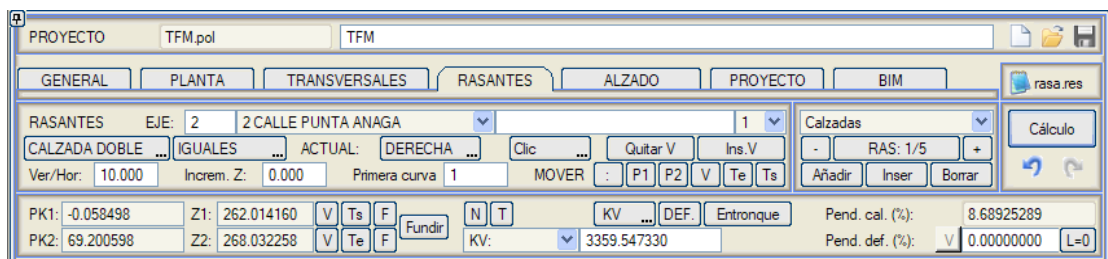

Figura 26. Menú de Rasantes (eje 2). Fuente: Elaboración propia.

Figura 27. Perfil de rasantes del eje 2. Fuente: Elaboración propia.

3.3.4. Cruce

Para elaborar cruce, se debe tener en cuenta cuál se considera que es el eje principal y cuál el secundario, ya que, en este último es donde se definirán los parámetros del cruce. En este caso, el secundario es el eje 2, y por lo tanto, se acude al submenú complementos/cruces de este eje (Figura 28), y en la pestaña 'Acuerdos' se incluye el eje con el que cruza (el eje 1), el PK en el que se produce la intersección y el lugar de los acuerdos a calcular DA y IA (Figura 29), y se calcula la rasante y los peraltes automáticamente.

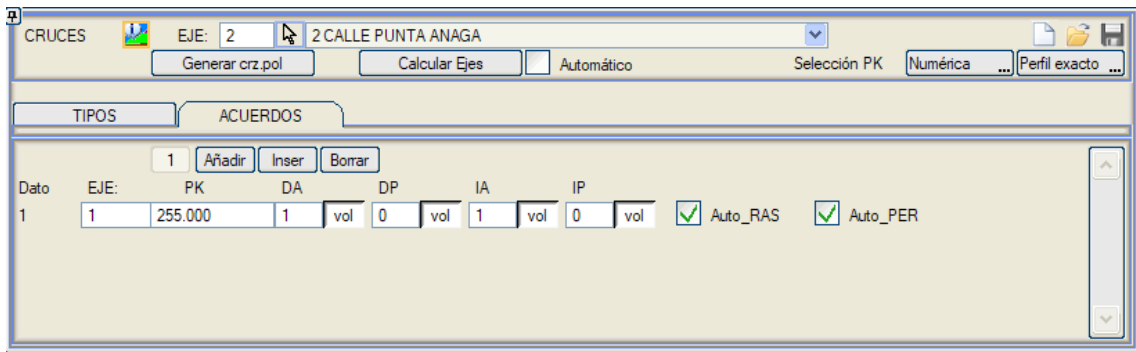

Figura 28. Menú de Cruces. Acuerdos Fuente: Elaboración propia.

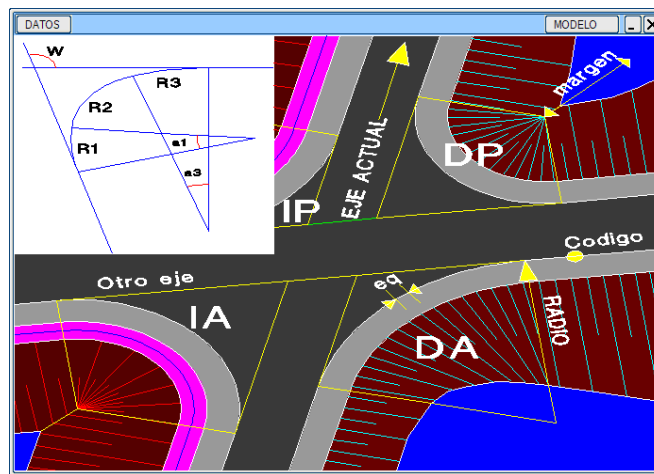

Figura 29. Parámetros de cruces según Istram. Fuente: Istram Ispol.

En la pestaña 'Tipos' se determinan los radios del acuerdo, los márgenes y otros parámetros (Figura 30).

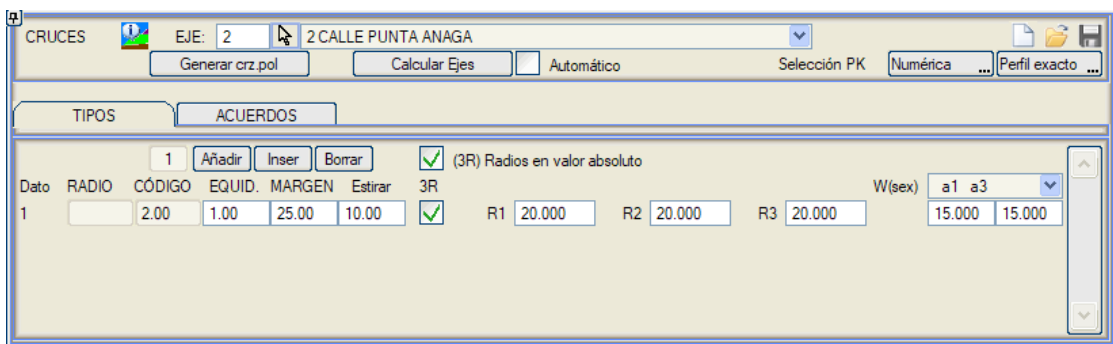

Figura 30. Menú Cruces. Tipos. Fuente: Elaboración propia.

3.3.5. Cálculo de volúmenes

A continuación, en el menú de Alzado es donde se define la intersección de los ejes, las modificaciones en la sección tipo, las marcas viales, las zonas de cálculo, etc.

Como se ve en la Figura 31, después de hacer el cálculo del eje 1, se ven los desmontes en azul y su volumen total de 12.549,39 m³, y los terraplenes en rojo con un volumen de 1.676,14 m³.

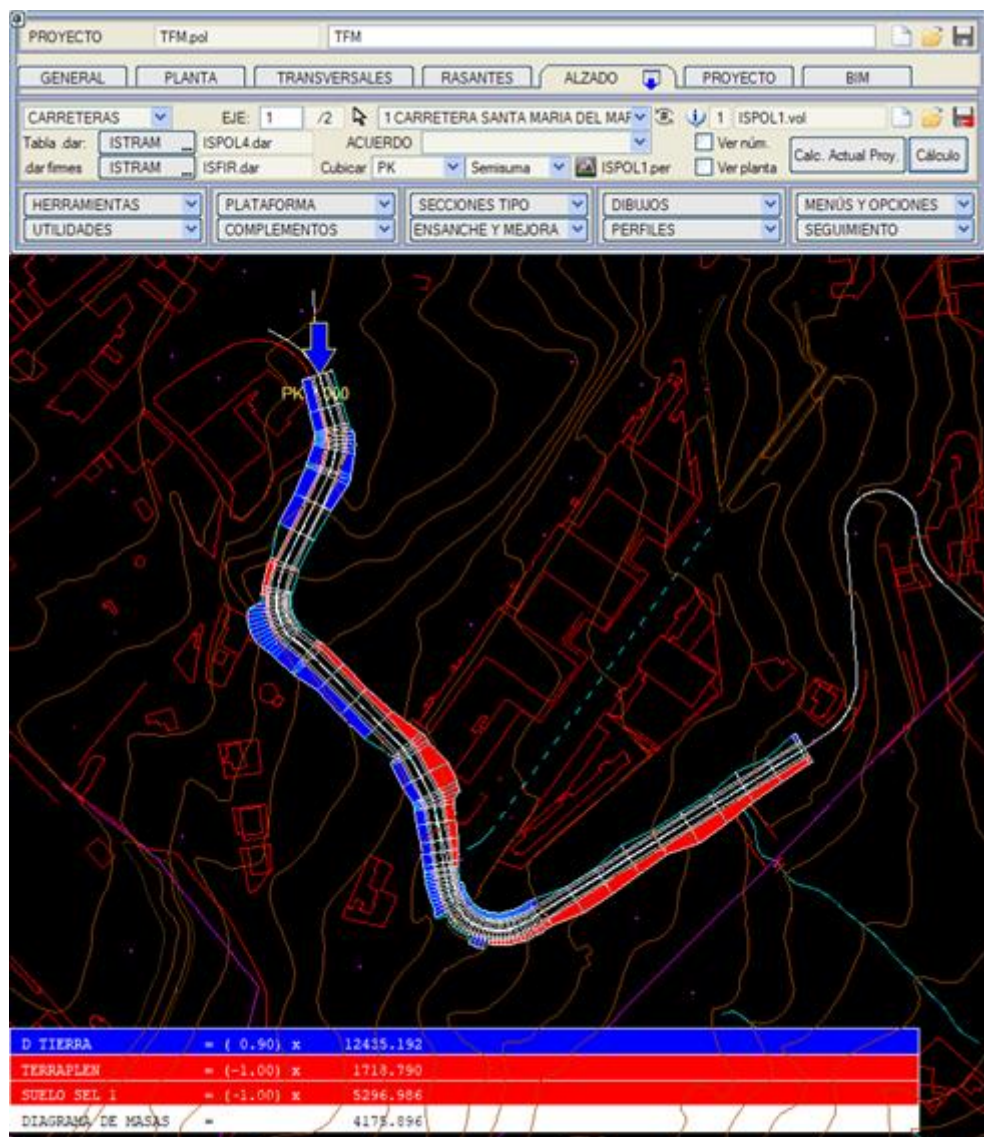

Figura 31. Menú de Alzado y eje 1 calculado. Fuente: Elaboración propia.

Como se ve en la Figura 32, después de hacer el cálculo, se ven los desmontes en azul y su volumen total de 3.000,791 m³, y los terraplenes en rojo con un volumen de 176,227 m³.

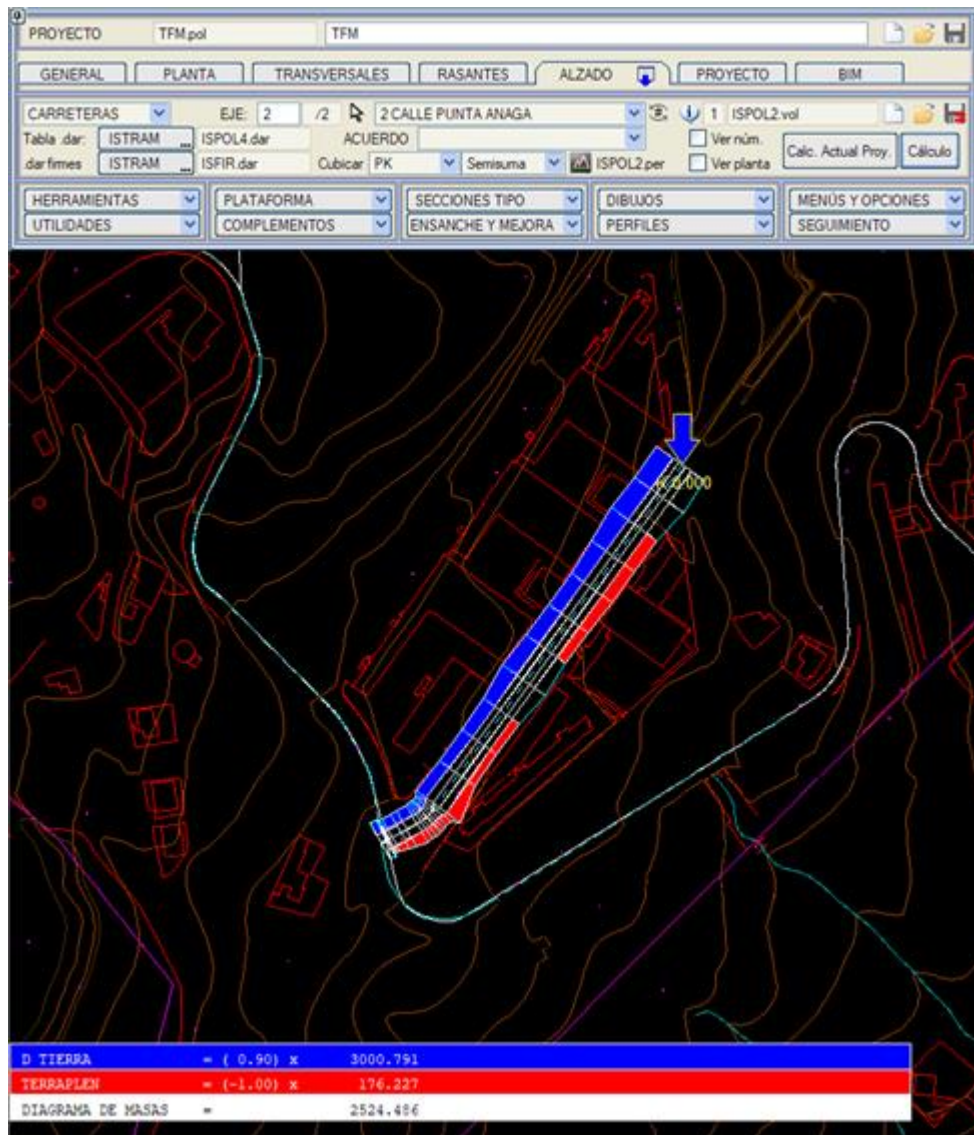

Figura 32. Menú Alzado y eje 2 calculado. Fuente: Elaboración propia.

3.3.6. Cálculo del proyecto

Una vez se han calculado todos los parámetros anteriores, subsanado errores y recalculado de nuevo, se debe situar en la pestaña 'Proyecto' y configurar varios apartados:

- Activar la función 'Cruces' y elegir la opción calcular 'Todo'.
- Activar la opción 'Marcas viales'.

- Activar 'Virtual 3D'
- Y activar las funciones CAL, ENL, REC y RFI, además de elegir la opción LBT+.lil, que aparece en la parte inferior derecha de la imagen.

Tomadas estas modificaciones (Figura 33), se calcula el proyecto y el resultado final se puede ver en la Figura 34, y como se ve en 3D (Figura 35).

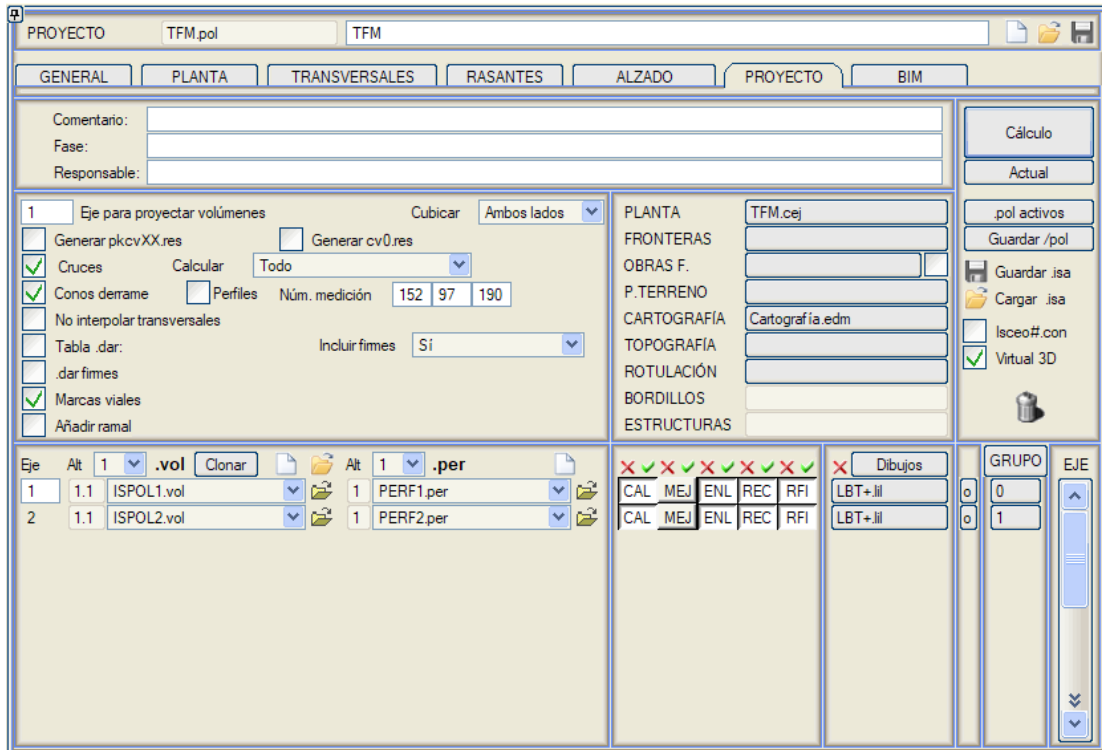

Figura 33. Menú Proyecto. Fuente: Elaboración propia.

Figura 34. Proyecto final. Resultado del cálculo del proyecto. Fuente: Elaboración Propia.

Figura 35. Modelo en 3D. Fuente. Elaboración Propia.

3.4. Exportación/Importación en IFC.

En este apartado se hablará sobre exportación a formato IFC desde el ISTRAM Ispol y la importación a otros visores o programas, atendiendo a las condiciones de visualización, pérdidas de información, etc.

3.4.1. Creación del archivo IFC en ISTRAM Ispol

La pestaña BIM del Programa contiene las opciones de exportación/importación IFC, que se pueden configurar en las tres subpestañas que se describirán brevemente a continuación.

En la pestaña 'Propiedades', se pondrá nombre al proyecto y se genera. También da la opción de activar o desactivar algunas propiedades como el firme, desmontes, etc. (Figura 36).

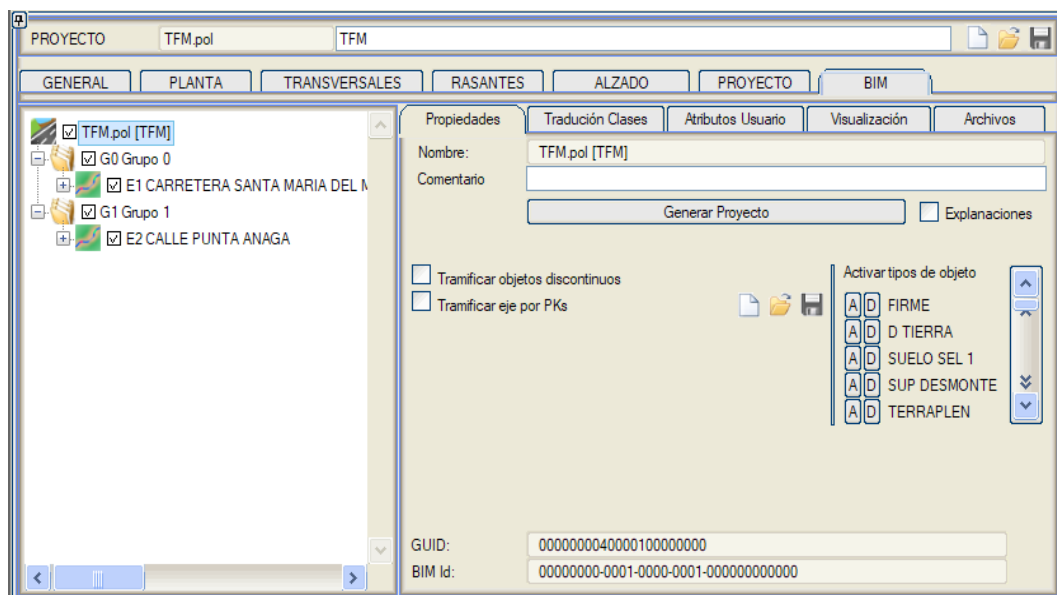

Figura 36. Menú BIM. Propiedades. Fuente: Elaboración propia.

En la Figura 37 se muestra la pestaña 'Visualización', donde se indicarán las características visuales del archivo. En 'Ver en Open GL' se podrá visualizar un modelo 3D del proyecto que servirá de guía para activar o desactivar las opciones de visualización.

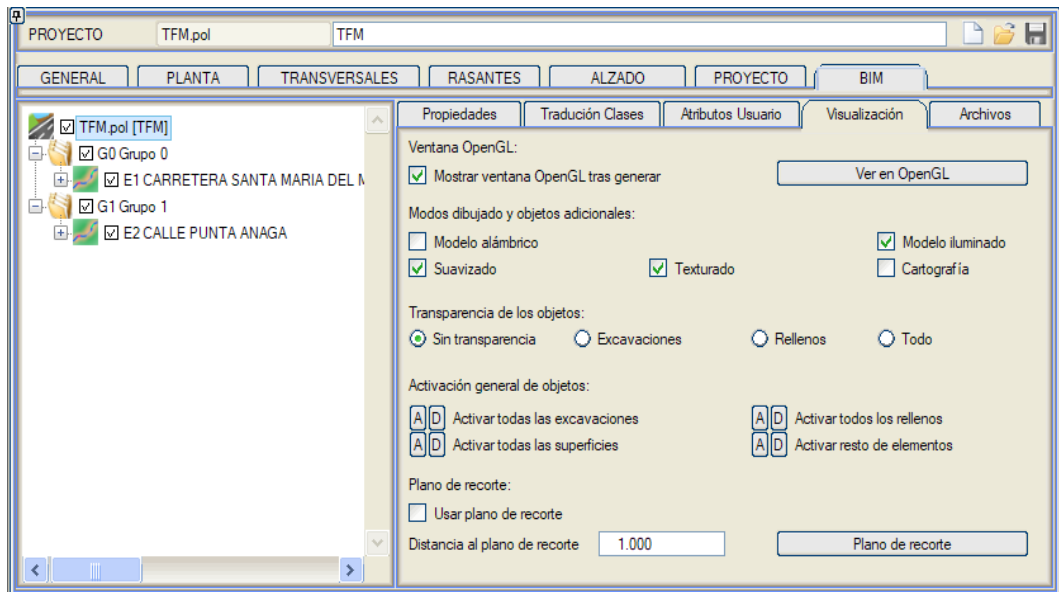

Figura 37. Menú BIM. Visualización. Fuente: Elaboración propia.

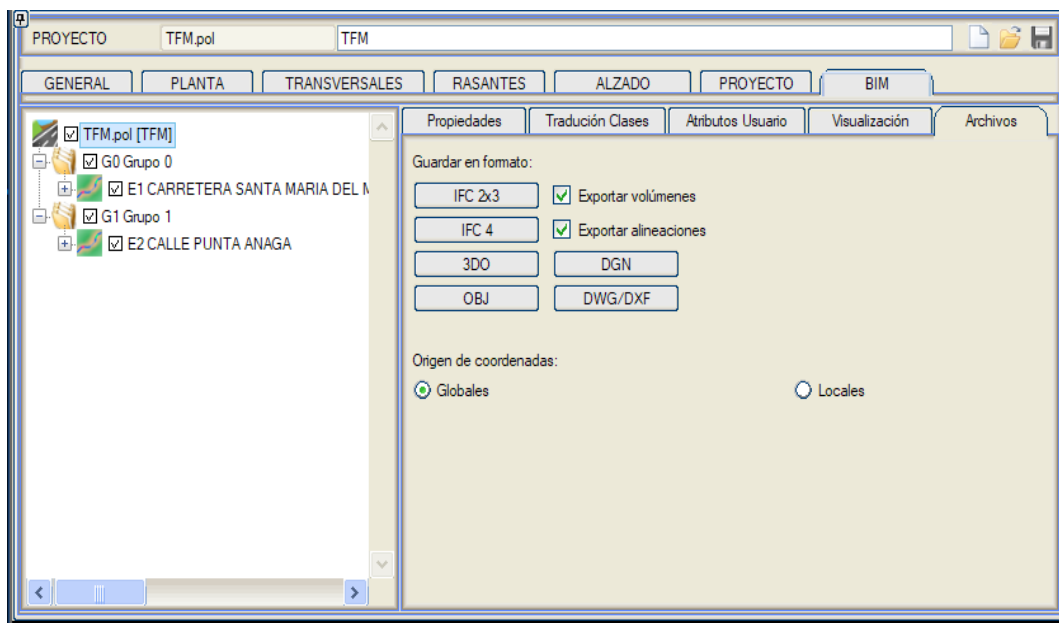

Figura 38. Menú BIM. Archivos. Fuente: Elaboración propia.

Como se puede ver en la Figura 38, ISTRAM Ispol permite dos opciones de exportación a IFC entre otras:

- IFC 2x3 (con/sin volúmenes y con/sin alineaciones)
- IFC 4 (con/sin volúmenes y con/sin alineaciones). Seleccionando esta opción debemos elegir entre dos posibilidades en relación a la geometría:

- ifcTriangulatedFaceSet. Es un conjunto de caras teseladas unidas por triángulos. Estas caras están construidas por polilíneas implícitas definidas por tres puntos cartesianos. Las coordenadas de cada punto las proporciona un índice en una lista ordenada de puntos cartesianos proporcionada por la lista bidimensional CoordIndex.
- ifcOpenShell. Es una biblioteca de software en código abierto, usado comúnmente en BIM, que ayuda a desarrolladores y usuarios a trabajar con archivo IFC.

3.4.2. Exportación/Importación a otros programas

Sabiendo que tipos de exportación a IFC permite ISTRAM Ispol, se procederá a escoger la configuración necesaria para exportar a otros programas y visores, y se observarán cuáles son las condiciones de la visualización, estado de la información, etc.

Para ello, con objeto de estudiar la interoperabilidad del modelo de infraestructuras, se ha propuesto para su testeo dos herramientas gratuitas y una con licencia educacional que posee un visualizador gratuito. En la Tabla 4 (apartado 2.3) se pueden ver las características principales de cada uno de los programas elegidos para el estudio que son:

- Naviswork Manage 2018
- BIMVision
- Solibri Model Viewer

Aplicando la configuración necesaria del archivo IFC para cada programa, se observarán y redactarán las prestaciones que ofrece cada software una vez importado el archivo.

3.4.2.1. Naviswork Manage 2018

Naviswork Manage 2018 es un software de revisión de proyectos que admite la simulación, coordinación, análisis y comunicación 5D de la intención y la viabilidad constructiva de los diseños. Es un software de pago que al formar parte de la casa Autodesk, tiene diversas ofertas, entre ellas, la licencia educacional que se ha empleado en este proyecto. También se puede adquirir, el software Autodesk

Navisworks Freedom, mencionado en la Tabla 4, que es el visor gratuito para archivos de formato NWD y DWF.

El Naviswork Manage abre los archivos IFC2x3 e IFC4 correctamente, con información sobre volúmenes, muestra una visualización con superficies irregulares suavizadas no triangulares.

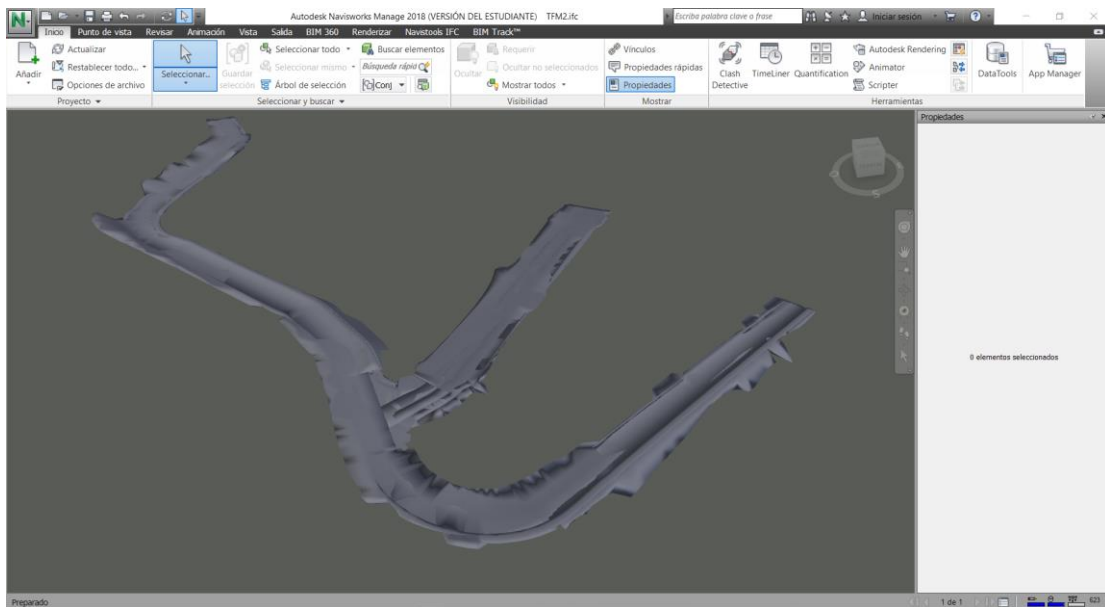

Figura 39. Captura de la exportación a Naviswork Manage 2018. Fuente: Elaboración propia.

Después de abrir el archivo IFC 2x3, no se muestra ninguna estructura de proyecto, para ver las propiedades de cada elemento de tramo, se abre la pestaña propiedades, se selecciona uno de los elementos y se mostrarán los datos (Figura 40 y Figura 41).

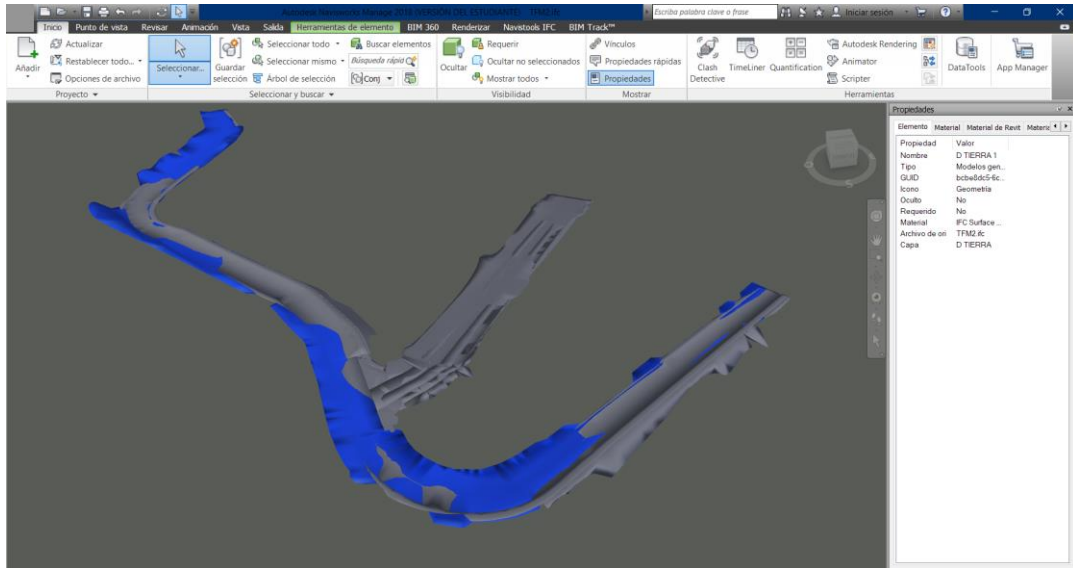

Figura 40. Captura de la exportación a Naviswork Manage 2018 con la selección del desmonte. Fuente: Elaboración Propia.

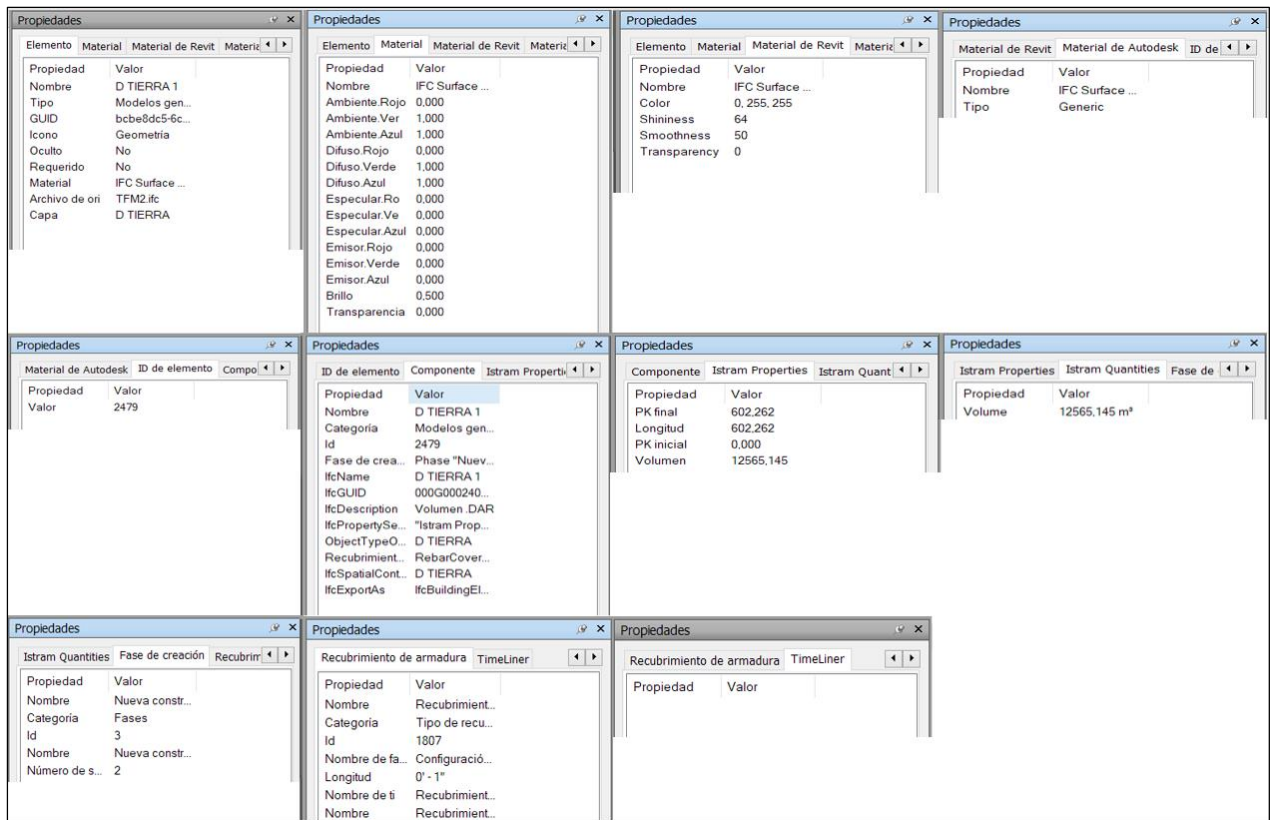

Figura 41. Conjunto de capturas a las pestañas de la ventana 'Propiedades' en Naviswork Manage 2018. Fuente: Elaboración Propia

En este caso se ha elegido el desmonte (D TIERRA 1) del eje 1 'E1 CARRETERA SANTA MARIA DEL MAR', y en Figura 41 se observan las pestañas que se pueden seleccionar en la ventana 'Propiedades', de las cuales se destacan:

- La pestaña 'Componente', donde aparecen las propiedades del IFC. Concretamente interesa la clase IFC en el apartado 'IfcExportAs'.
- Las pestañas 'Istram Properties' e 'Istram Quantities' contienen los valores numéricos como la longitud y el volumen.

3.4.2.2. BIMVision

BIMVision es un visor de modelos IFC freeware que permite visualizar modelos virtuales procedentes de otros programas sin necesidad de una licencia comercial de estos. BIMVision, actualmente en su versión 2.19, visualiza modelos BIM creados en IFC2x3 y IFC4, además, mejora en la versión 2.18 en varios aspectos, los más notables son la admisión de más elementos y tipos de IFC4 y la creación de pestañas de 'Ubicación' y 'Clasificación' en la ventana de 'Propiedades'. El modelo se carga sin texturas, con un volumen triangulado, y con la información sobre alineaciones y volúmenes presentada como se explicará a continuación.

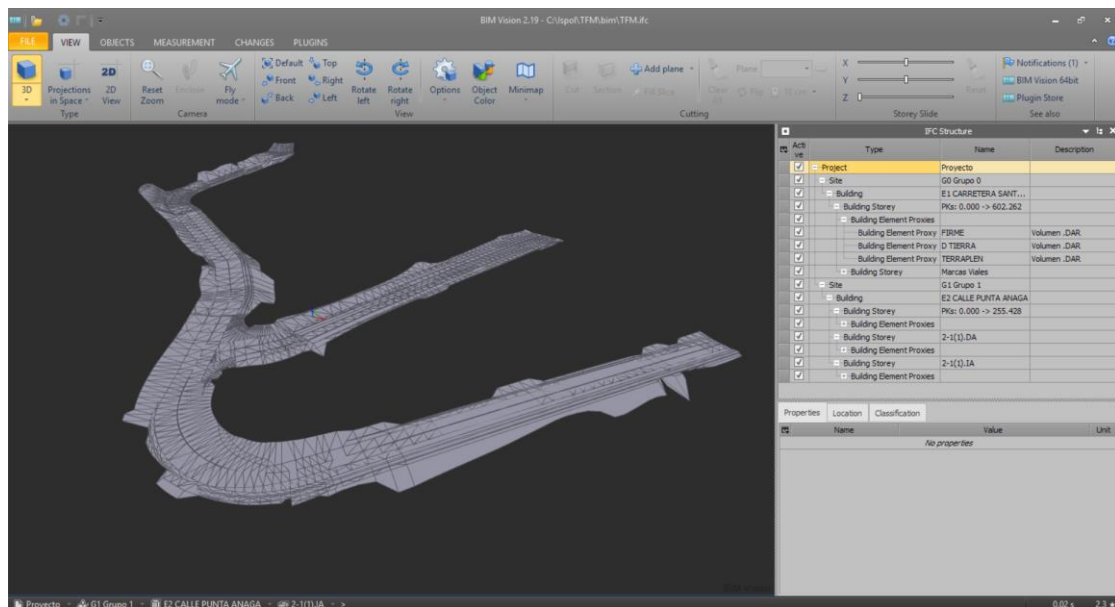

Figura 42. Captura de la exportación a BIMVision. Fuente: Elaboración propia.

Si se amplía el cuadro de datos de la Figura 42 (Figura 43), se observa la estructura del archivo IFC. Los ejes los identifica como 'building'. Estos se dividen en 'niveles de

edificio' que son en el eje (Pks de inicio y final), marcas viales, y, en caso del eje 'E2 CALLE PUNTA ANAGA', incluye también las dos transiciones que completan la intersección con el otro eje.

Luego se divide en 'Elementos constructivos', donde distingue entre el paquete de firme, desmonte, terraplén, etc.

Figura 43. Captura de la exportación a BIMVision. Fuente: Elaboración propia.

En la Figura 44, se puede ver que la clase IFC aparece en la pestaña 'Propiedades', en el apartado 'Element Specific', subapartado 'ifcEntity', y como la identidad que da, por defecto, a los elementos de obra civil es 'ifcBuildingElemenProxy', y se puede ver también algunas de sus propiedades como la longitud y el volumen.

Propiedades		Localización	Clasificación

Bounding Box Height	51,2297		m

Figura 45. Captura de la exportación a BIM Vision. Fuente: Elaboración propia.

En la pestaña 'Clasificación' no aparece ningún dato.

3.4.2.3. Solibri Model Viewer

El Solibri Model Viewer es un software gratuito de visualización de modelos 3D. Se ha empleado la versión v9.8. Solo reconoce el archivo si se guarda en IFC2x3, muestra una estructura similar al BIMVision, donde reconoce las alineaciones como edificios y volúmenes, y se visualiza, como se ve en la Figura 46, sin triangular, y diferenciando en colores los desmontes, terraplenes, plataforma de los ejes y las transiciones en los cruces.

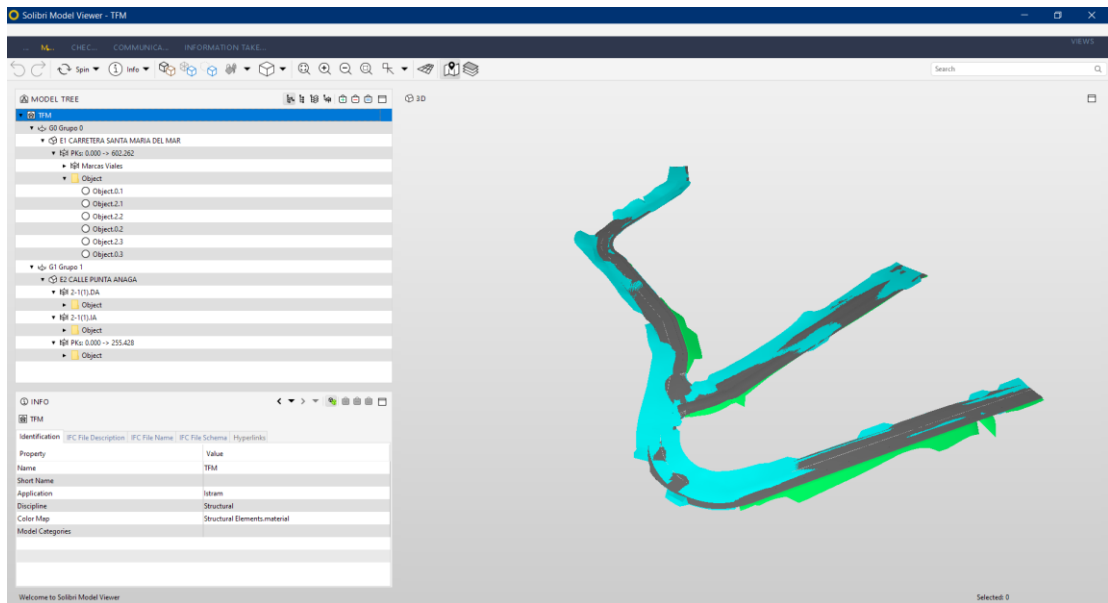

Figura 46. Captura de la exportación a Solibri Model Viewer. Fuente: Elaboración propia.

En la Figura 47, se amplía el recuadro de propiedades de la parte izquierda de la Figura 46, y se puede ver la estructura que, a diferencia del BIMVision, incluye las marcas viales como subnivel dentro del eje y a los elementos les da el nombre de 'Object'.

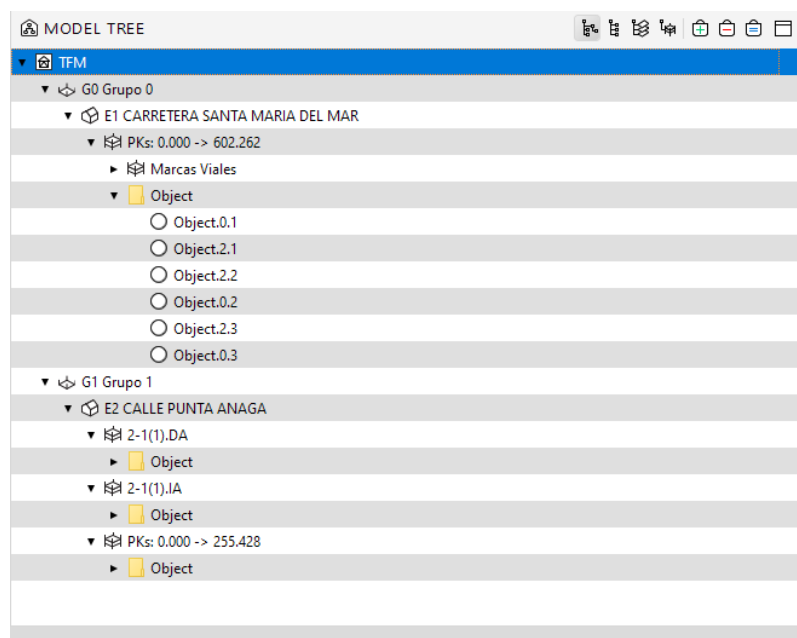

Figura 47. Captura de la exportación a Solibri Model Viewer. Fuente: Elaboración propia.

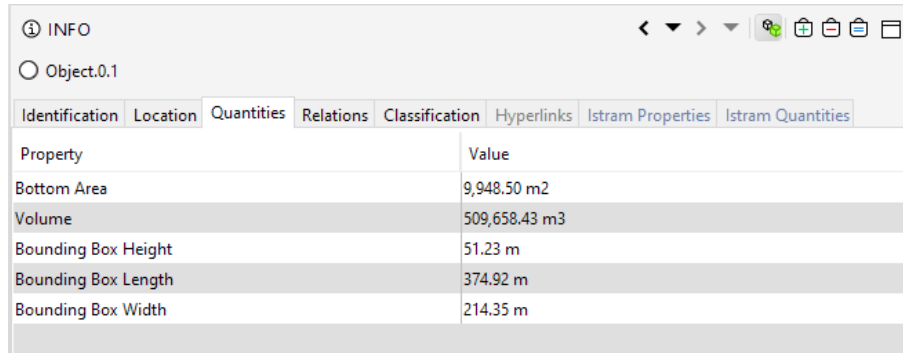

Las propiedades aparecen, como en el caso de BIMVision, en una ventana debajo de la estructura del proyecto y se observa que cuenta con ocho pestañas, de las cuales dos, la de 'Classification' y 'Hyperlinks', no contienen información.

Figura 53. Captura de la exportación a Solibri Model Viewer. Fuente: Elaboración propia.

Se puede ver claramente que en ninguna de las figuras anteriores de este apartado sobre Solibri Model Viewer se muestra el nombre de la clase IFC del archivo.

3.5. Propuesta de clasificación BIM para elementos de Infraestructuras

En base al caso de estudio se propone una clasificación basada en el sistema de clasificación BIM GuBIMclass v.1.2, que asigna una codificación para las partidas de proyectos, basándose en los elementos de construcción de acuerdo a su función principal, creada por el Grupo de Usuarios de Cataluña GuBIMCat⁶ en Julio de 2017.

Esta clasificación, actualmente, está compuesta por cuatro niveles. En el primer nivel se divide en ocho secciones, una de ellas, se denomina 'Urbanización de los espacios exteriores' (Tabla 5), y en ella se incluyen algunos elementos propios de una obra civil, y poseen un código. Sin embargo, la clasificación en sí no está pensada para infraestructuras por lo que no se pueden definir correctamente todos los elementos de las mismas. Debido a esto se propone configurar una nueva clasificación, basada en el sistema de GuBIMCat, que permita identificar mediante un código, todos los elementos de infraestructuras.

⁶ Grupo de Usuarios de Cataluña, GuBIMCat. <http://gubimcat.blogspot.com/>

70				70	Urbanización de los espacios exteriores
70	10			70.10	Elementos de cimentación, contención de tierras y elementos estructurales

70	50	20	10	70.50.20.10	Parterres fijos
70	50	20	20	70.50.20.20	Parterres móviles
70	60			70.60	Mobiliario urbano y elementos de señalización
70	60	10		70.60.10	Mobiliario exterior
70	60	20		70.60.20	Juegos infantiles
70	60	30		70.60.30	Mobiliario exterior especial
70	60	40		70.60.40	Señalización horizontal
70	60	50		70.60.50	Señalización vertical

Tabla 5. Sistema de clasificación BIM GuBIMClass v1.2. Sección 'Urbanización de los espacios exteriores'. Fuente GuBIMCat

Como esquema básico, se toman las unidades de obra que habitualmente se encuentran recogidas en los proyectos de infraestructuras civiles, como una carretera, el generador de precios de la construcción de CYPE⁷ y el banco de precios BEDEC del Instituto de Tecnología de la Construcción (ITeC)⁸.

⁷ Generador de precios de la construcción. CYPE Ingenieros S.A.

http://www.generadordeprecios.info/espacios_urbanos/Equipamiento_urbano/Equipamiento_para_playas.html

⁸ Banco de precios BEDEC. Instituto de Tecnología de la Construcción (ITeC). <https://itec.es/banco-precios-bedec/elementos-unitarios-ingenieria-civil/demoliciones-derrribos-movimientos-tierras-gestion-residuos-c95/>

A continuación, se detalla la propuesta de clasificación partiendo de tres secciones principales denominadas 'Acondicionamientos del terreno', 'Sistema estructural' y 'Urbanización y Obra Civil' con los códigos 100, 110 y 120 respectivamente (Tabla 6).

Denominación	Código
Acondicionamientos del terreno	100
Sistema estructural	110
Urbanización y Obra Civil	120

Tabla 6. Apartados del primer nivel de la propuesta de clasificación y su código.

Fuente: Elaboración Propia.

La tabla seguirá teniendo cuatro niveles de clasificación siendo el primer nivel las secciones nombradas anteriormente. La primera sección con código 100 de 'Acondicionamientos del terreno', será de estructura similar al apartado 10 sobre 'Adecuación del terreno y sustentación del edificio' de la GuBIMClass v1.2, pero específica para obra civil y con más contenido, y tendrá tres subapartados iguales, salvo en una modificación de nombre en el segundo: 'Actuaciones para reducir y contralar las afectaciones a infraestructuras y servicios colindantes', 'Movimientos de tierras/ Explanaciones' y 'Reducción del nivel freático'. En la Tabla 7 se muestra la clasificación propuesta para esta primera sección.

SISTEMA DE CLASIFICACIÓN DE ELEMENTOS					
Nivel 1	Nivel 2	Nivel 3	Nivel 4	Código Completo	Descripción
100				100	Acondicionamientos del terreno
100	10			100.10	Actuaciones para reducir y controlar las afectaciones a infraestructuras y servicios colindantes
100	10	10		100.10.10	Apuntalamientos y arriostramientos
100	10	10	10	100.10.10.10	Puntales metálicos
100	10	10	20	100.10.10.20	Anclajes temporales
100	10	10	30	100.10.10.30	Apuntalamientos específicos para túneles
100	10	20		100.10.20	Entibaciones
100	10	20	10	100.10.20.10	Entibación en zanja
100	10	20	20	100.10.20.20	Entibación específica para túneles
100	10	30		100.10.30	Hinca de tubos
100	10	30	10	100.10.30.10	Hinca de tubos por empuje horizontal
100	10	30	20	100.10.30.20	Elementos auxiliares para la hinca de tubos
100	10	40		100.10.40	Otras actuaciones para controlar afectaciones
100	20			100.20	Movimiento de tierras / Explanaciones
100	20	10		100.20.10	Topografía
100	20	20		100.20.20	Desbroce de terreno
100	20	30		100.20.30	Excavaciones en desmonte
100	20	40		100.20.40	Excavaciones de zanjas, pozos y cimientos
100	20	40	10	100.20.40.10	Excavación de cimentación
100	20	40	20	100.20.40.20	Excavación de pozo
100	20	40	30	100.20.40.30	Excavación de zanja
100	20	50		100.20.50	Refino y compactación de suelos, taludes y explanadas
100	20	60		100.20.60	Rellenos
100	20	60	10	100.20.60.10	Terraplenes
100	20	60	20	100.20.60.20	Pedraplenes
100	20	60	30	100.20.60.30	Relleno localizados
100	20	60	40	100.20.60.40	Rellenos todo a uno
100	20	70		100.20.70	Precorte de taludes en roca
100	20	80		100.20.80	Escarificación y compactación de suelos
100	20	90		100.20.90	Excavación de túnel
100	20	90	10	100.20.90.10	Excavación de túnel
100	20	90	20	100.20.90.20	Excavación de la destroza de túnel
100	20	90	30	100.20.90.30	Excavación manual en galería
100	20	100		100.20.100	Movimiento de tierras bajo agua
100	20	100	10	100.20.100.10	Dragados marinos
100	20	100	20	100.20.100.20	Dragados desde tierra
100	20	100	30	100.20.100.30	Excavación de zanjas bajo el agua
100	20	100	40	100.20.100.40	Formación y acabado de lechos de escollera
100	30			100.30	Reducción del nivel freático
100	30	10		100.30.10	Elementos generales de agotamiento del nivel freático
100	30	10	10	100.30.10.10	Decantador
100	30	10	20	100.30.10.20	Tubería para agotamientos
100	30	10	30	100.30.10.30	Contador para agotamientos
100	30	20		100.30.20	Agotamiento con sistema de bombeo
100	30	20	10	100.30.20.10	Pozo de bombeo
100	30	30		100.30.30	Agotamiento con sistema Wellpoint
100	30	30	10	100.30.30.10	Lanza de succión

Tabla 7. Primera sección de la propuesta de clasificación de elementos. Fuente:

Elaboración Propia

La segunda sección denominada 'Sistema estructural', con código 110, también guarda similitudes con el apartado 20 con el mismo nombre de la GuBIMClass, dividiéndose en dos subapartados: 'Cimentaciones, Contenciones y Túneles' y 'Estructura'. La Tabla 8 contiene los demás niveles de esta sección.

SISTEMA DE CLASIFICACIÓN DE ELEMENTOS					
Nivel 1	Nivel 2	Nivel 3	Nivel 4	Código Completo	Descripción
110				110	Sistema estructural
110	10			110.10	Cimentaciones, Contenciones y Túneles
110	10	10		110.10.10	Elementos superficiales
110	10	10	10	110.10.10.10	Vigas riostra
110	10	10	20	110.10.10.20	Zapatas
110	10	10	30	110.10.10.30	Encepados
110	10	10	40	110.10.10.40	Losas de cimentación
110	10	10	50	110.10.10.50	Hormigón de limpieza
110	10	10	60	110.10.10.60	Pozos de cimentación
110	10	10	70	110.10.10.70	Zanjas y pozos
110	10	20		110.10.20	Elementos profundos
110	10	20	20	110.10.20.20	Pantallas de cimentación
110	10	20	30	110.10.20.30	Pilotes de cimentación
110	10	20	40	110.10.20.40	Micropilotes
110	10	20	50	110.10.20.50	Jet-grouting
110	10	30		110.10.30	Elementos de contención: muros y pantallas
110	10	30	10	110.10.30.10	Muros de contención
110	10	30	20	110.10.30.20	Muros de contención de mampostería
110	10	30	30	110.10.30.30	Muros de contención de hormigón
110	10	30	40	110.10.30.40	Muros de gunitado
110	10	30	50	110.10.30.50	Pantallas de contención
110	10	30	60	110.10.30.60	Pilones de contención
110	10	30	70	110.10.30.70	Muros de micropilotes
110	10	30	80	110.10.30.80	Muros de jet-grouting
110	10	30	90	110.10.30.90	Muros de tablestacas
110	10	30	100	110.10.30.100	Sistemas de anclaje y apuntalamiento de elementos de contención definitivos
110	10	40		110.10.40	Gaviones y Escolleras
110	10	40	10	110.10.40.10	Estructura de gaviones
110	10	40	20	110.10.40.20	Escolleras sobre fondo no sumergido, de piedra natural
110	10	40	30	110.10.40.30	Escolleras de bloques prefabricados
110	10	40	40	110.10.40.40	Escolleras marítimas de piedra natural
110	10	40	50	110.10.40.50	Concertado de escollera
110	10	40	50	110.10.40.50	Bases
110	10	40	10	110.10.40.10	Soleras
110	10	40	20	110.10.40.20	Rampas
110	10	40	30	110.10.40.30	Subbases
110	10	40	60	110.10.40.60	Túneles
110	20			110.20	Estructura
110	20	10		110.20.10	Estructura vertical
110	20	10	10	110.20.10.10	Pilares
110	20	10	20	110.20.10.20	Ménsulas
110	20	10	30	110.20.10.30	Muros estructurales
110	20	10	40	110.20.10.40	Escaleras de estructura
110	20	10	50	110.20.10.50	Rampas de estructura
110	20	10	60	110.20.10.60	Estribos
110	20	10	70	110.20.10.70	Tensoros verticales
110	20	20		110.20.20	Estructura horizontal
110	20	20	10	110.20.20.10	Forjados
110	20	20	20	110.20.20.20	Jácnas
110	20	20	30	110.20.20.30	Cerchas
110	20	20	40	110.20.20.40	Viguetas
110	20	20	50	110.20.20.50	Membranas
110	20	20	60	110.20.20.60	Tensoros horizontales
110	20	30		110.20.30	Estructura tridimensional
110	20	30	10	110.20.30.10	Bóveda
110	20	30	20	110.20.30.20	Arco
110	20	30	30	110.20.30.30	Cúpula
110	20	30	40	110.20.30.40	Malla espacial
110	20	40		110.20.40	Estructuras flotantes
110	20	40	10	110.20.40.10	Pantalanes flotantes
110	20	40	20	110.20.40.20	Pasarelas
110	20	50		110.20.50	Armaduras
110	20	50	10	110.20.50.10	Armaduras activas
110	20	50	20	110.20.50.20	Armaduras pasivas
110	20	60		110.20.60	Encofrados
110	20	70		110.20.70	Cerramientos y divisorias
110	20	70	10	110.20.70.10	Paredes de tabiques de obra de fábrica
110	20	70	20	110.20.70.20	Cerramientos de placas
110	20	70	30	110.20.70.30	Subbases

Tabla 8. Segunda sección de la propuesta de clasificación de elementos. Fuente: Elaboración Propia

Como última sección de esta propuesta, se detalla la denominada 'Urbanización y Obra Civil' con código 120. Esta sección que se detalla en la Tabla 9, es la que más cambia

con respecto al apartado 70 de la GuBIMClass (Tabla 5) sobre 'Urbanización de los espacios exteriores'.

SISTEMA DE CLASIFICACION DE ELEMENTOS					
Nivel 1	Nivel 2	Nivel 3	Nivel 4	Código Completo	Descripción
120				120	Urbanización y Obra Civil
120	10			120.10	Firmes y Pavimentos urbanos
120	10	10		120.10.10	Firmes
120	10	10	10	120.10.10.10	Flexibles
120	10	10	20	120.10.10.20	Rígidos
120	10	20		120.10.20	Explanadas
120	10	20	10	120.10.20.10	Explanadas por estabilización mecánica
120	10	20	20	120.10.20.20	Explanadas con aporte de material
120	10	20	30	120.10.20.30	Explanadas por estabilización con aditivos
120	10	30		120.10.30	Subbases
120	10	30	10	120.10.30.10	Subbases granulares

Tabla 9. Tercera sección de la propuesta de clasificación de elementos. Fuente: Elaboración Propia

En relación con la estructura del archivo IFC generado en este trabajo, como se puede ver en la Figura 54, el eje 1 es más simple con menos elementos, mientras que en la Figura 55, el eje 2 tiene más elementos. Esto es así debido a la configuración predeterminada que se le dio a la sección transversal de cada eje.

Building	E1 CARRETERA SANTA ...	
Building Storey	PKs: 0.000 -> 602.262	
Building Element Proxies		
Building Element Proxy	FIRME	Volumen .DAR
Building Element Proxy	D TIERRA	Volumen .DAR
Building Element Proxy	SUELO SEL 1	Volumen .DAR
Building Element Proxy	TERRAPLEN	Volumen .DAR
Building Storey	Marcas Viales	
Building Element Pro...		
Building Element P...	D_M1.11	Volumen .DAR
Building Element P...	C_M.2.6b	Volumen .DAR
Building Element P...	C_M.2.6b	Volumen .DAR

Figura 54. Estructura del IFC del eje 1. Fuente: BIMVision

Building	E2 CALLE PUNTA ANAGA	
Building Storey	PKs: 0.000 -> 255.428	
Building Element Proxies		
Building Element Proxy	FIRME	Volumen .DAR
Building Element Proxy	D TIERRA	Volumen .DAR
Building Element Proxy	TERRAPLEN	Volumen .DAR
Building Element Proxy	Base T1:() S1:()	Volumen .DAR
Building Element Proxy	Base b T1:() S1:()	Volumen .DAR
Building Element Proxy	Subbase T1:() S1:()	Volumen .DAR
Building Element Proxy	Rodadura T1:() S1:()	Volumen .DAR
Building Element Proxy	Rigola T1:() S1:()	Volumen .DAR
Building Element Proxy	Bordillo T1:() S1:()	Volumen .DAR
Building Element Proxy	Base acera T1:() S1:()	Volumen .DAR

Building Element Proxy	Adoquin T1:() S1:()	Volumen .DAR
Building Element Proxy	Terreno T1:() S1:()	Volumen .DAR
Building Element Proxy	Cama arena T1:() S1:()	Volumen .DAR
Building Element Proxy	Pavimento T1:() S1:()	Volumen .DAR

Figura 55. Estructura del IFC del eje 2. Fuente: BIMVision

A continuación, en la Tabla 10 se procederá a clasificar los elementos de cada eje según la propuesta de clasificación BIM anterior, pero antes, se deben tener en cuenta algunos aspectos:

- Los elementos 'D-M1.11' y 'C_M2.6b' (Figura 54) son tipos de marcas viales y por tanto llevarán la misma codificación ya que la clasificación no está pensada a tanto nivel de detalle.
- En el eje 2, los elementos desde 'Base' hasta 'Pavimento' (Figura 55) son parte del elemento 'FIRME'. Esto se debe a que la sección transversal del eje 2 consta de tres firmes diferentes para aceras, calzadas y mediana. Concretamente:
 - Los elementos 'Base', 'Subbase' y 'Rodadura' `son de la sección de la calzada.

- 'Base acera', 'Mortero' y 'Adoquín' pertenecen a la sección de la acera.
- Los elementos 'Terreno', 'Cama arena' y 'Pavimento' pertenecen a la sección de la mediana.
- El elemento 'Rígola' está entre la calzada y la mediana, mientras que el elemento 'Bordillo' separa la acera de la calzada. El elemento 'Base b' es donde se apoya el bordillo.

Eje	Elemento	Código	Descripción
1	Firme	120.10	Firmes y pavimentos urbanos
	Desmante	100.20.30	Excavaciones en desmante
	Terraplén	100.20.60.10	Terraplenes
	Marcas Viales	120.10.80.10	Señalización horizontal
2	Desmante	100.20.30	Excavaciones en desmante
	Terraplén	100.20.60.10	Terraplenes
	Firme	120.10	Firmes y Pavimentos urbanos
	Base	120.10.40.10	Bases granulares
	Base b	120.10.40.10	Bases granulares
	Subbase	120.10.30.10	Subbases granulares
	Rodadura	120.10.20.10	Flexibles
	Rígola	120.10.70.40	Rígoles
	Bordillo	120.10.70.30	Bordillos
	Base acera	120.10.40.10	Bases granulares
	Mortero	120.10.40.20	Bases de hormigón magro
	Adoquín	120.10.50.40	Pavimentos de piezas de hormigón
	Terreno	120.10.20.20	Explanadas con aporte de material
	Cama arena	120.10.40.10	Bases granulares
Pavimento	120.10.50.30	Pavimentos de losetas de mortero de cemento

4. Resultados, Conclusiones y Recomendaciones

4.1. Resultados

A la vista de los contenidos desarrollados en el presente proyecto, se pueden extraer los siguientes resultados en relación a la fase de modelado, a la exportación de los archivos IFC y la clasificación generada.

Como se ha visto en la fase de modelado del caso de estudio, ISTRAM Ispol es una herramienta con buenos resultados en el diseño de infraestructuras, con una interfaz muy intuitiva, y su servicio técnico ha proporcionado una ayuda inestimable para solucionar los problemas que han surgido en el proceso de diseño en este proyecto. Las pruebas realizadas con Autodesk Civil 3D no permiten obtener un modelo IFC de buena calidad.

En lo relativo a los tres visores utilizados, lo primero que se percibe es la falta de detalles en las descripciones de los elementos de una carretera, ya que en ninguno de los programas de visualización estudiados se consigue una definición completa del elemento seleccionado. Esto es aplicable a cualquier infraestructura, ya que las aplicaciones y los formatos aún no se han diseñado para reconocer este tipo de elementos, en especial en el ámbito de la ingeniería civil.

En cuanto al formato abierto empleado en este proyecto, el IFC, se ha comprobado que no todos los programas son capaces de reconocer las últimas versiones, como IFC4. Los visores de IFC actualmente solo identifican la estructura propia de los edificios, es decir, por plantas, no existe una estructura adaptada para las infraestructuras. Lo que hacen programas de diseño para poder exportar en IFC2x3, como ISTRAM Ispol en este caso, es adaptar la composición de la carretera a esa estructura. Además, algunos visores IFC no muestran la clase IFC del elemento, y aquellos que sí lo hacen, ponen la misma clase para todos los elementos de carreteras, 'IfcElementProxy', lo que indica que no existe una clase IFC para diferenciar los distintos elementos como puede ser una carretera convencional, una autopista, un puente, un túnel, etc. o incluso elementos más específicos como paquete de firme, arcenes, aceras, mobiliario urbano etc.

Como ya se ha reflejado, no existe un sistema de clasificación BIM adaptado a los elementos de infraestructura y obra civil. Con la propuesta del apartado 3.5 se ha conseguido clasificar el caso de estudio, e incluso añadir una codificación a algunos elementos más que, aunque no aparezcan en el diseño de este proyecto, suelen encontrarse en cualquier proyecto de infraestructuras.

Esta propuesta en inicial y la idea es poder seguir trabajando en ella, intentando abarcar otro tipo de infraestructuras: puentes, puertos, infraestructuras hidráulicas, etc.

4.2. Conclusiones

A lo largo de este estudio se han enunciado algunos de los múltiples beneficios de trabajar en BIM y como la utilización de programas que incorporen este sistema permiten extraer datos de mayor precisión y valor añadido.

La interoperabilidad entre los diversos softwares es una de las claves para que la implantación del BIM tenga éxito, y para ello, es recomendable la existencia y el uso de un formato libre que contenga la máxima cantidad de información posible sobre el proyecto. Como se ha visto en el caso de estudio, el formato IFC todavía no es un formato que pueda utilizarse en el día a día del diseño y ejecución de una obra de infraestructuras, ya que las pérdidas de información son grandes y la utilidad del archivo reducida. Sin embargo, en el marco teórico ya se adelantaba que se están haciendo avances significativos en el desarrollo de este formato como son el IFC4 y en un futuro IFC5, para que la Ingeniería Civil se sume a las ventajas que proporciona trabajar en BIM, como ya se hace en la edificación, y eso que esta última se encuentra aún en sus inicios y todavía no aprovecha todas las posibilidades que ofrece este sistema y esta filosofía de trabajo.

Se ha visto en este proyecto que la ausencia de una codificación de los elementos dificulta la identificación de los mismos y por ello, la creación de un sistema de clasificación unificado de elementos de infraestructura similar al propuesto en este proyecto y su inclusión en los softwares de modelado de infraestructuras existentes, así como software de presupuestos, etc., es parte de la implantación del BIM y contribuirá a una mayor interoperabilidad de todos ellos, y, por consiguiente, una mejora en todos los aspectos para los agentes implicados en un proyecto de obra civil.

En conclusión, como ya se establece en la normativa vigente, el presente y el futuro del sector de la construcción en general pasa por el BIM. Con un buen sistema basado en BIM, ya sea por la reducción en los tiempos de obra, o por su eficacia a la hora de subsanar errores tanto en la fase de diseño como de ejecución, o por el ahorro en costes que supone, la implantación del BIM es clave, ya lo es en edificación, donde evoluciona a pasos agigantados dadas las ventajas que ofrece en múltiples aspectos, y deberá serlo en un futuro cercano en la Ingeniería Civil.

4.3. Líneas de trabajo futuro

Este proyecto es ampliable ya que se trata de un tema muy complejo con infinitas posibilidades en distintas líneas de trabajo y nuevas funcionalidades tanto para software de edición como para visores. A continuación, se indican algunas líneas de trabajo que pueden ser interesantes y que aportarían mucho al desarrollo del BIM en el sector.

Una línea de trabajo de cara a un futuro más próximo, es la mejora de la codificación de elementos de carreteras como se ha hecho brevemente en este proyecto, y como ya se hace en edificación, o incluso más allá, creando distintos tipos de relaciones como contener información relativa a fabricantes, proveedores, materiales, etc.

Otra línea de avance para los visores sería implementar algún tipo de control de usuarios, de forma que el software pueda ser utilizado simultáneamente por varios usuarios en un mismo archivo, y que puedan compartir comentarios, anotaciones, etc. en tiempo real y a la vez que cada uno tenga un espacio personal donde poder almacenar sus ficheros sin que los demás usuarios tengan acceso.

Otro punto a tener en cuenta para su desarrollo, es la verificación de normativa para revisión de proyectos y trabajos durante su diseño. Tener la posibilidad de revisar, no solo si el trazado cumple con la normativa de carreteras, como hace ISTRAM Ispol, sino si todos los elementos que componen una infraestructura están dentro de la normativa, supondría una mejora notable en fase de proyecto, redacción, mantenimiento, movilidad, etc.
